

MANUAL HARD COPY DISTRIBUTION

DOCUMENT TRANSMITTAL 2003-3266

USER INFORMATION:

[REDACTED] CA#: 0363
[REDACTED]
[REDACTED]

TRANSMITTAL INFORMATION:

[REDACTED] 01/20/2003

LOCATION: DOCUMENT CONTROL DESK
FROM: NUCLEAR RECORDS DOCUMENT CONTROL CENTER
(NUCSA-2)

THE FOLLOWING CHANGES HAVE OCCURRED TO THE HARDCOPY
OR ELECTRONIC MANUAL ASSIGNED TO YOU:

104 - 104 - RADIATION PROTECTION COORDINATOR (RPC):
EMERGENCY PLSN-POSITION SPECIFIC PROCEDURE

REMOVE MANUAL TABLE OF CONTENTS DATE: 08/26/2002

ADD MANUAL TABLE OF CONTENTS DATE: 01/17/2003

CATEGORY: PROCEDURES TYPE: EP
ID: EP-PS-104
REMOVE: REV:15

ADD: REV: 16

UPDATES FOR HARD COPY MANUALS WILL BE DISTRIBUTED
WITHIN 5 DAYS IN ACCORDANCE WITH DEPARTMENT
PROCEDURES. PLEASE MAKE ALL CHANGES AND
ACKNOWLEDGE COMPLETE IN YOUR NIMS INBOX UPON
RECEIPT OF HARD COPY. FOR ELECTRONIC MANUAL USERS,
ELECTRONICALLY REVIEW THE APPROPRIATE DOCUMENTS AND
ACKNOWLEDGE COMPLETE IN YOUR NIMS INBOX.

A045

PROCEDURE COVER SHEET

PPL SUSQUEHANNA, LLC		NUCLEAR DEPARTMENT PROCEDURE	
RADIATION PROTECTION COORDINATOR: Emergency Plan-Position Specific Procedure			EP-PS-104 Revision 16 Page 1 of 4
<u>QUALITY CLASSIFICATION:</u> () QA Program (X) Non-QA Program		<u>APPROVAL CLASSIFICATION:</u> () Plant () Non-Plant (X) Instruction	
EFFECTIVE DATE: <u>11/17/2003</u>			
PERIODIC REVIEW FREQUENCY: <u>2 Years</u>			
PERIODIC REVIEW DUE DATE: <u>11/17/2005</u>			
<u>RECOMMENDED REVIEWS:</u> All			
Procedure Owner:		<u>Nuclear Emergency Planning</u>	
Responsible Supervisor:		<u>Radiation Protection Manager</u>	
Responsible FUM:		<u>Supv.-Nuclear Emergency Planning</u>	
Responsible Approver:		<u>Vice President-Nuclear Operations</u>	

RADIATION PROTECTION COORDINATOR (RPC):

Emergency Plan-Position
Specific Procedure

WHEN: Technical Support Center (TSC) is activated
HOW NOTIFIED: Paged, phone backup
REPORT TO: TSC Emergency Director
WHERE TO REPORT: TSC

OVERALL DUTY:

Quantify and assess radiological conditions both on- and off-site, then recommend emergency classification and protective actions.

<u>MAJOR TASKS:</u>	<u>TAB:</u>	<u>REVISION:</u>
Obtain briefing on the emergency.	TAB A	3
Activate TSC Health Physics group and, if needed, request EOF activation.	TAB B	4
Make sure initial habitability is assessed.	TAB C	7
Take inventory of information required to analyze the radiological situation.	TAB D	5
Brief Emergency Director in the TSC on what you know about radiological conditions and Health Physics staff.	TAB E	1
Assess emergency classification and confirm or recommend changes to the Emergency Director.	TAB F	5
Assess and recommend protective actions to the Emergency Director.	TAB G	9
Communicate with DEP/BRP.	TAB H	4
Continue assessing radiological situation, updating Emergency Director, TSC staff, and Health Physics staff.	TAB I	8
Evaluate and approve emergency exposure extensions.	TAB J	1

MAJOR TASKS:

TAB:

REVISION:

Manage turn over to the next shift.	TAB K	0
Manage vehicle decontamination.	TAB L	1
Transfer Back Calculations, and responsibility for DEP/BRP communications to the EOF.	TAB M	3

SUPPORTING INFORMATION:

TAB:

Emergency Telephone Instructions	TAB 1
Emergency Organization	TAB 2
Response Levels for Protection Action Guides	TAB 3
SSES Contamination Response Plan	TAB 4
Emergency Facility Form Flow	TAB 5
Emergency Classification	TAB 6
Public Protective Action Recommendation Guide	TAB 7
PPL Emergency Personnel Dose Assessment and Protective Action Recommendation (PAR) Guide	TAB 8
TSC Rad Staff Responsibilities	TAB 9
Personnel Accountability	TAB 10
Emergency Exposure Extensions	TAB 11
Emergency Forms	TAB 12
• Protective Action Recommendation Form	
• Emergency Exposure Extension Request	
Intentionally Blank	TAB 13
Liquid Discharge Data Sheets	TAB 14
PPL Radiological Representation/Participation in FRMAC	TAB 15
TSC Dose Assessment Flowchart	TAB 16

NUREG-0731, Guidelines for Utility Management Structure and Technical Resources,
September 1980

SP-00-308, Emergency Medical Response

MAJOR TASK:

Obtain briefing on the emergency.

SPECIFIC TASKS:

HOW:

- | | |
|--|--|
| 1. Go to the TSC and talk with Emergency Director or Operation Coordinator and HP II Dose Calculator. | 1a. Key questions might include:
<ul style="list-style-type: none">(1) Is there a release?(2) Status of OSCAR?
(Dispatch, if necessary.)(3) Are on-shift Health Physics Technicians available? in Control Room?(4) Get some indication from Emergency Director about what the plant's radiological status is. Consider:<ul style="list-style-type: none">(a) Indication of fuel damage.(b) High rad areas in plant.(c) Accident type.(d) Current met data.(e) Plume pathway.(f) Release data.(g) ARMs. |
| 2. Inform Emergency Director and Administrative Coordinator of your arrival. | |
| 3. Determine need or status of additional personnel such as Health Physics management, technicians, or EOF responders. | 3a. Discuss manpower requirements with the Health Physics Specialist, (Health Physics Duty Foreman).

NOTE:
Minimum staffing requirements are ten Health Physics Technician qualified personnel. |
| 4. Obtain copies of any Protective Action Recommendation Forms. | 3b. Request the Health Physics Specialist to call-out additional Health Physics support, as needed. |
| 5. Determine the status of any communications to DEP/BRP. | 5. Make sure DEP/BRP radiological is notified approximately every 30 minutes. |

MAJOR TASK:

Take inventory of information required to analyze the radiological situation.

SPECIFIC TASKS:

HOW:

1. Evaluate offsite radiological conditions.

1a. Review available data such as:

- (1) Valid release rates (airborne and liquid).
- (2) Field measurements.
- (3) Meteorological data.
- (4) Dose calculations.
- (5) Affected sectors.

NOTE:

"White" PICSY data is an indication of unreliable data. It may be normal and acceptable due to low or no flow in the SPING Monitor or may indicate a release exceeding the range of the instrument or an indication of instrumentation or computer interface problems.

HELP

Response Levels for Protection Action Guides
See TAB 3

HELP

Liquid Discharge Data Sheets
See TAB 14

HELP

TSC Dose Assessment Flowchart
See TAB 16

1b. Determine if Iodine detection channels are over responding due to interference from noble gas or short lived nitrogen isotopes. The data is suspect if the NG/I-131 release rate ratio is less than 1,000 for a given vent.

SPECIFIC TASKS:

HOW:

HELP

TSC Dose Assessment Flowchart
See TAB 16 Page 3

- 1c. If low confidence (white) PICSY data exists:
- (1) If data is suspect, consult with Operations or Engineering to determine if condition is normal.
 - (2) Use appropriate data such as grab sample (vent, PAVSS, HP air samples) results or previously measured or default noble gas to iodine/particulate ratios in Forward Calculation.

HELP

TSC Dose Assessment
Flowcharts
See TAB 16 Page 4

- (3) Ensure OSCAR is taking air samples as appropriate and is maintaining their exposure ALARA.
- (4) Report conditions as a potential unmonitored or an unmonitored release depending on measured to projected dose rate ratios.
- (5) Initiate Back Calculations if field data is available.

SPECIFIC TASKS:

HOW:

2. Evaluate onsite radiological conditions.

2a. Review available data such as:

- (1) ARMs.
- (2) Containment integrity.
- (3) Containment high rad monitor.
- (4) Liquid release.
- (5) CAM's.
- (6) INDIA Team's survey data.
- (7) HVAC status/conditions.
- (8) Status of turbine building doors.
- (9) Status of blow-out panels.

MAJOR TASK:

Assess emergency classification and confirm or recommend changes to the Emergency Director.

SPECIFIC TASKS:

HOW:

1. Quantify available radiological release information.

1a. Quantify both airborne and/or liquid releases.

2. Classify conditions using matrix.

HELP

Emergency Classification
See TAB 6

3. Recommend any changes in classification to the Emergency Director.

HELP

Liquid Discharge Data Sheets
See TAB 14

HELP

TSC Dose Assessment Flowchart
See TAB 16

MAJOR TASK:

Continue assessing radiological situation, updating Emergency Director, TSC staff, and Health Physics staff.

SPECIFIC TASKS:

HOW:

1. Attend TSC briefing and provide radiological status.

1a. Give the status of the following items at the briefing:

- (1) Current radiological release status and Dose Projections.
- (2) Current and forecast weather conditions.
- (3) Oscar locations, current radiological information, and Real Time Monitoring System data.
- (4) In-plant radiological conditions.
- (5) Protective action(s) implemented or under consideration.

2. Periodically brief Health Physics staff and receive updates from them.

HELP

TSC Rad Staff Responsibilities
See TAB 9

3. Perform frequent on-going assessment of radiological situation both offsite and onsite.

4. Periodically perform general HP operation assessment.

4a. Verify form flows, board is being maintained, contamination controls in place, and that staffing is adequate.

5. Provide information to Ops Coordinator on rad releases and projected doses to the public for use by Control Room personnel.

5a. Notify Operations Coordinator if doses at the EPB are projected to exceed **1 rem TEDE or 5 rem Thyroid CDE**. Control Room needs radiological data to evaluate entry conditions and action levels for EOP procedures. These procedures require operator actions such as rapid depressurization based on projected doses.

SPECIFIC TASKS:

HOW:

NOTE:

These procedures also require that projected doses be determined when containment venting is needed.

- 5b. Discuss projection time with Ops Coordinator. (This may differ from the default projection time being used in the dose projection model.) Consider the following:
- (1) Prognosis of event.
 - (2) Time to cooldown to <200 deg.
 - (3) Duration & type of release.
 - (4) Weather forecasts.
 - (5) Protective measures already implemented.
 - (6) Release pathway - possible filtration and/or monitoring.
6. Continue to evaluate the current PAR and recommend revising the PAR to the Emergency Director based on increasing dose levels.

TSC DOSE ASSESSMENT FLOWCHART

TAB 16
EP-PS-104-16

Proceed to OSC when:
* Paged
* Notified by Phone
* Directed by Supervisor

MONITOR EFFLUENT RELEASE AND PLANT STATUS
* PICSY Met Vent Data
* Field Team and Fixed Monitor Data
* In-Plant Conditions

Is Any PICSY Data White?

Are All Vent Totals Valid? (Help Pg 4)

Is Iodine Data Valid? (Help Pg. 3)

Is Alternate Vent Data Available? (Help Pg 4)

Is Noble Gas Data Valid?

Use Default Iodine or Particulate Values (Help Pg 4)

Is a Release Inprogress? (note 1 pg.2)

FORWARD CALCULATION using Vent Data
MIDAS Menu B

For OSCAR Dose Rate(s) \geq LLD
Calculate Measured Oscar EDE/Projected EDE Ratio & Measured OSCAR CDE/Projected CDE Ratio

Are Ratios between 0.1 and 1?

High Field Readings Perform Back Calculation MIDAS Menu E-W
Release Is unmonitored If Ratio > 5

Are Ratios > 1 ?

Low Field Readings < 0.1 LOCATE PLUME

Use Forward Calculation Data

Is Plume Located?

Is RMS or Field Data > Triggers? (note 2 pg 2)

UNMONITORED RELEASE MIDAS Menu E - W Back Calculation

- * Select appropriate TEDE and THY CDE
- * Discuss Release Pathway and Source Term with TSC Engineering Staff
- * Report Classification and PAR Triggers to ED
- * Select PAR per PAR Guide

ED/RPC
* Approve PAR Forms
* Contact DEP/BRP
- About every 30 Minutes
- Classification or PAR Change

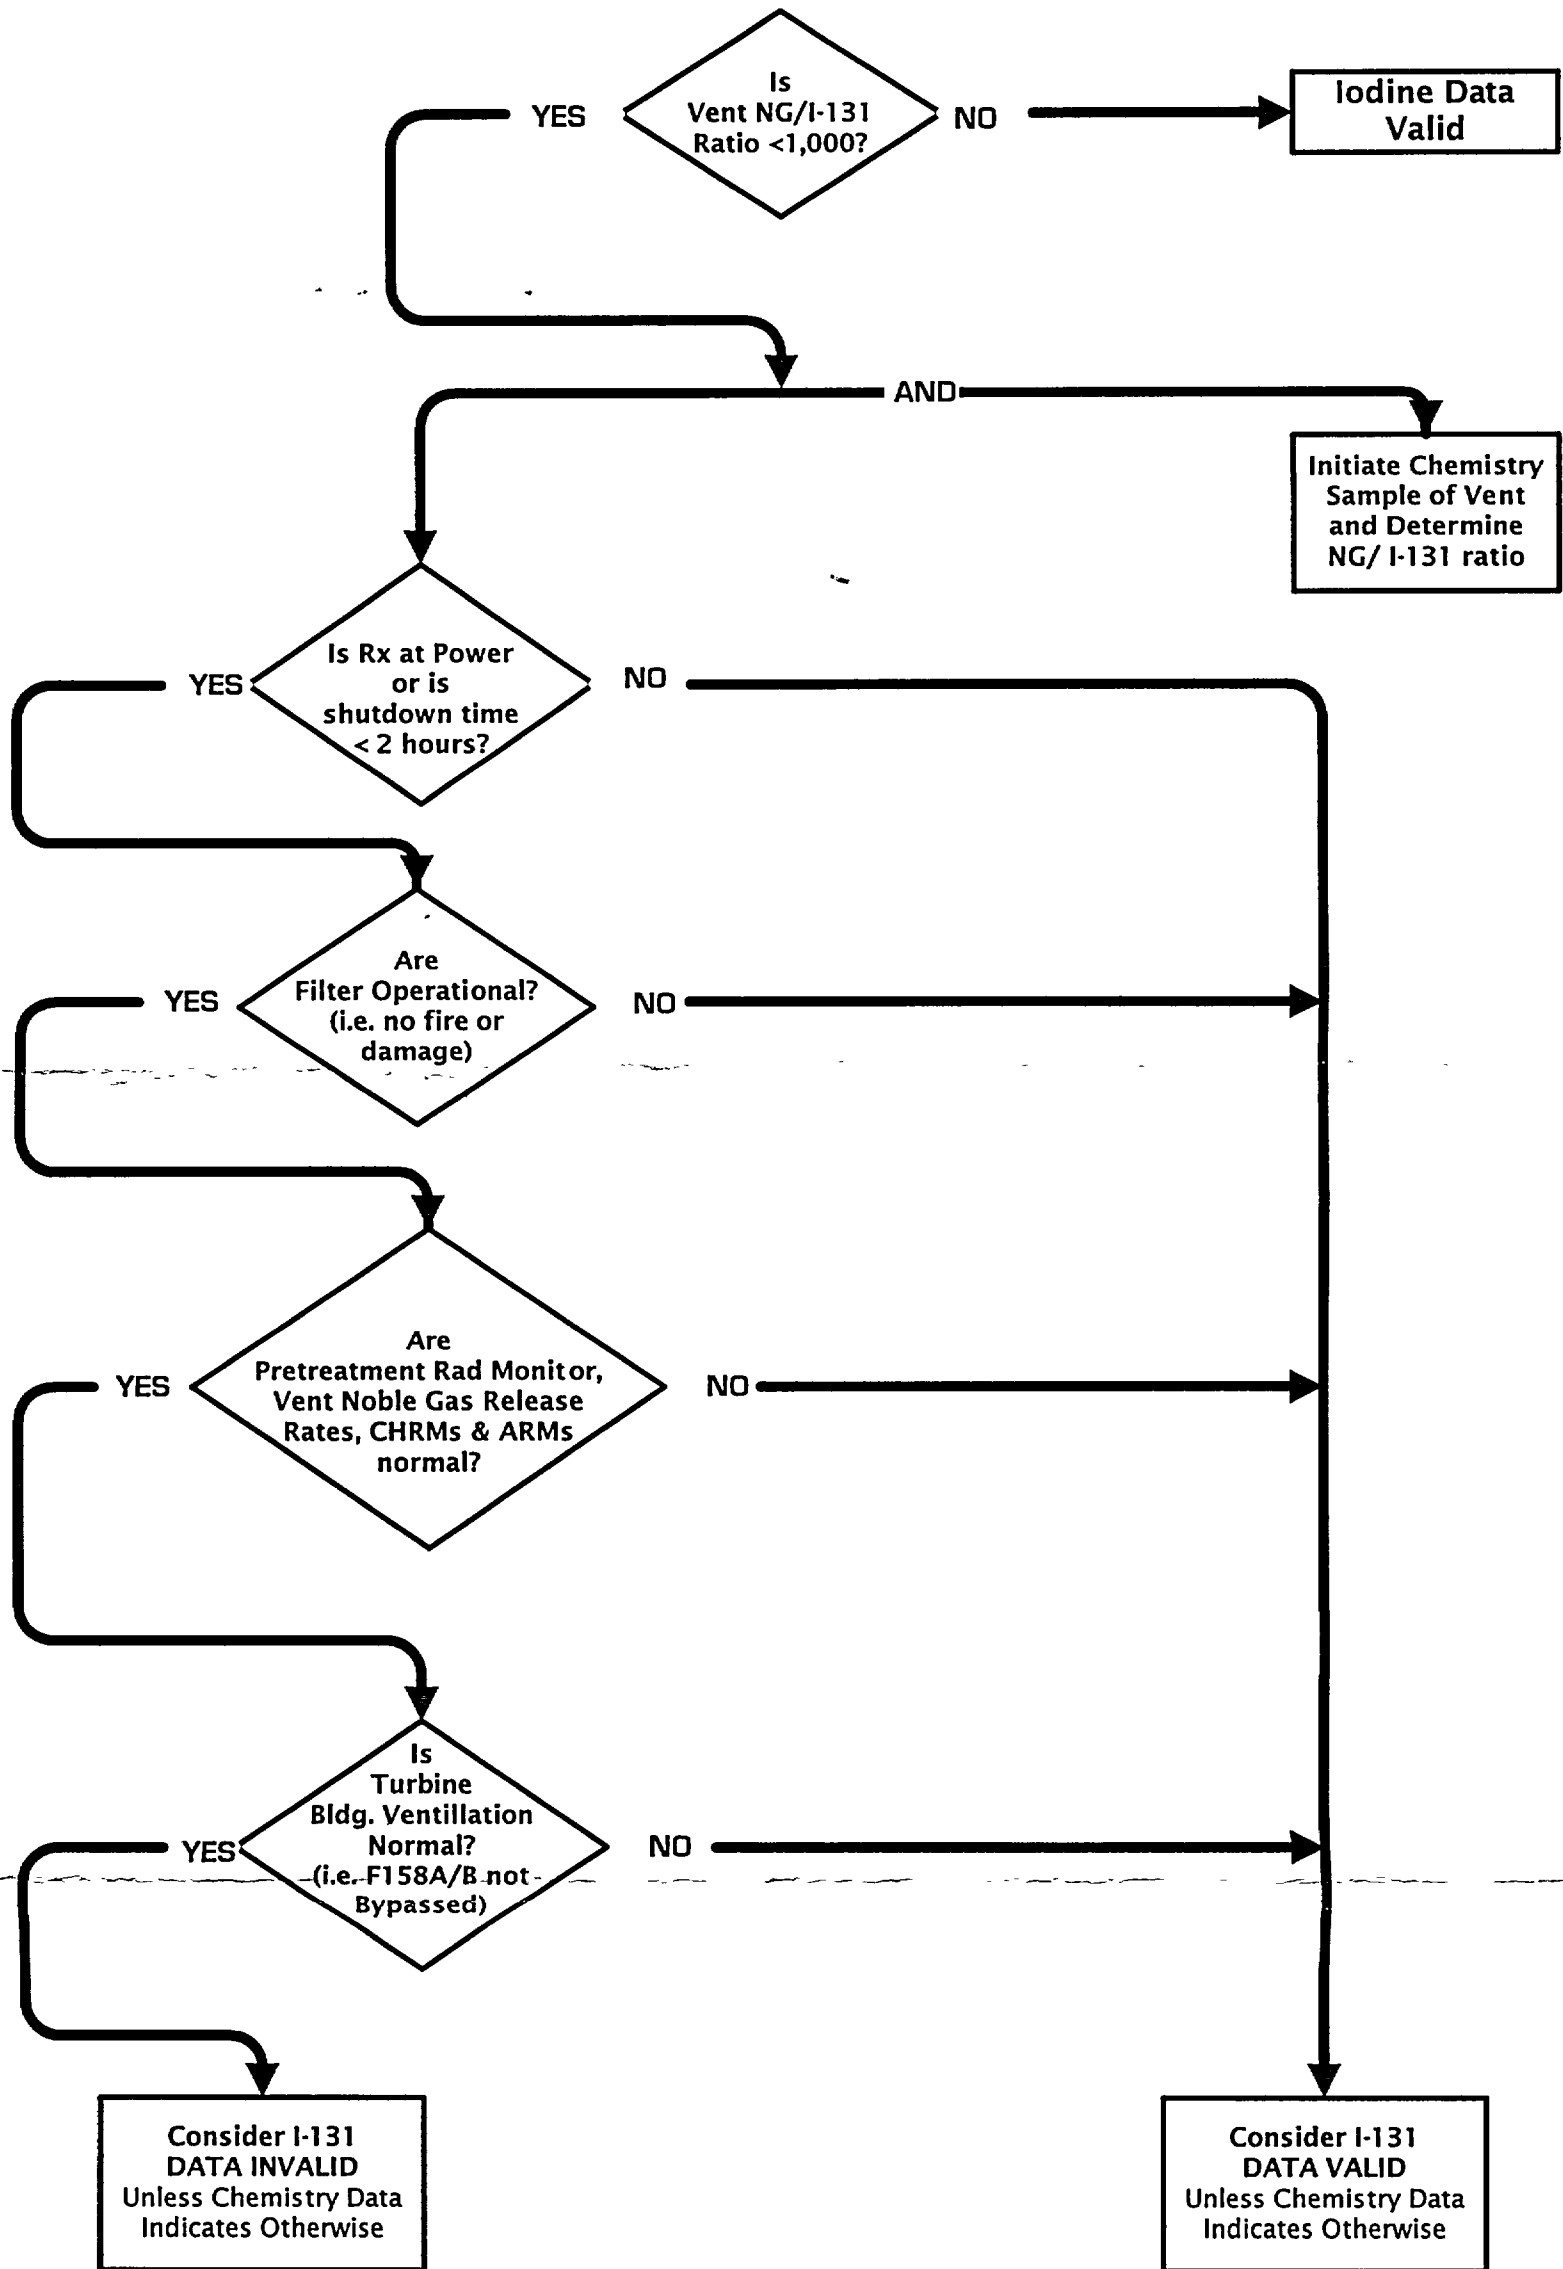

- * Control Exposure and Dose < 4 Rem WB
- * > 4 Rem WB - w/Emerg. Extension
- * Consider Respiratory Protection for OSCAR > 1000 mrem/hr Thy CDE
- * > 1200 ncpm (cartridge)
- * Consider WBC

Release Terminated?

* Consider transition from plume to post-plume phase

TEST FOR IODINE VALIDITY

QUESTIONABLE NOBLE GAS DATA

SPING Noble Gas
Value(s) White

Determine Status of SBTG
* If SBTG has actuated, the affected Unit Rx Bldg data will turn white. This condition is normal and acceptable due to no flow through the vent?

NG Totals Valid?

Continue Using SPING DATA

Take Appropriate Action:
* Restore Channel
* Obtain/Analyze Vent Sample(s)
* Initiate PAVSS
* Obtain Air Sample(s)
* Obtain Field Reading

QUESTIONABLE IODINE DATA

SPING IODINE
Value(s) White

Determine Status of SBTG
* If SBTG has actuated, the affected Unit Rx Bldg data will turn white. This condition is normal and acceptable due to no flow through the vent?
* Is the release through an unaffected vent?
Note:
If vent NG release rate is less than 10% of the peak vent NG release rate, it is an unaffected vent.
Note:
Data will turn white due to High Resolution Time (~1hr @ 2E4 uCi/min)

Iodine Totals Valid?

Continue Using SPING DATA

Take Appropriate Action:
* Use default Ratio NG/I=1,000
* Use last valid NG/I Ratio if appropriate
* Restore Channel
* Obtain/Analyze SPING or PAVSS Vent Sample(s)
* Initiate PAVSS
* Obtain Air Sample(s)
* Obtain Field Reading

QUESTIONABLE PARTICULATE DATA

SPING PARTICULATE
Value(s) White

Determine Status of SBTG
* If SBTG has actuated, the affected Unit Rx Bldg data will turn white. This condition is normal and acceptable due to no flow through the vent?
* Is the release through an unaffected vent?
Note:
If vent NG release rate is less than 10% of the peak vent NG release rate, it is an unaffected vent.

Particulate Totals Valid?

Continue Using SPING DATA

Take Appropriate Action:
* Use default Ratio NG/Part.=10,000
* Use last valid NG/Part. Ratio if appropriate
* Restore Channel
* Obtain/Analyze SPING or PAVSS Vent Sample(s)
* Initiate PAVSS
* Obtain Air Sample(s)
* Obtain Field Reading
