Subject: Monday Morning

Rani,
Saw Michael Vick overwhelm Carolina yesterday. The game was ugly from our perspective.

I plan to be in all day Monday and Tuesday this week. I am planning to take off on Wed. Duke is off both Thanksgiving day and the day after. Will be back in on 12/2/2002.

Thanks for the three calls Friday.

WRT to SB Followup item, I agree with your plan. My email with the 11/21 letter crossed with you reply. If the staff can handle within the SER, we will handle in the Final UFSAR Supplement which already has the term 'susceptible' in it. All is settled on this one.

WRT to the nickel based alloy item, two points. One, I agree with your second call. Two, the alloy 600 aging mechanism is PWSCC which is driven by primary chemistry, and these components are in the secondary side chemistry. All is settled on this one, too.

I am in standby waiting for any more calls that may be necessary this week.
Bob
