Private Fuel Storage Facility

Skull Valley, Utah

Stone & Webster Project No. J.O. 05996.02

AGEC Project No. 1000912

Gentlemen!

Applied Geotechnical Engineering Consultants, Inc. was requested to perform laboratory testing on 48 samples taken from the proposed Private Fuel Storage Facility (PFSF) site in Skull Valley, Utah. Sampling was performed by an AGEC technician. Sampling was directed by an Engineer from Stone & Webster, Inc.

SCOPE OF WORK

The following tests were performed on each sample in general accordance with the test method listed.

Test	Test Method
Moisture Content	ASTM D2216
Dry Preparation of Samples	ASTM D421
Particle Size Analysis	ASTM D422
· Atterberg Limits	ASTM D4318

The samples consisted of Jar and bucket samples from each location. Moisture content tests were performed on the jar samples. The classification tests were performed on bucket samples. The laboratory testing is summarized on Table I. Particle size distribution curves are presented graphically on Figures 1 through 24.

PARTICLE SIZE ANALYSIS

Particle fractions from the sieve analyses are reported in Table I according to ASTM D422 as follows:

600 West Sandy Parkway • Sandy, Utah 84070 • (801) 566-6399 • FAX (801) 566-6493

PFS-47929

Template = SECY-028

68174 ECY-02

Gravel Passing 3-in. and retained on No. 4 sieve

Sand Passing No. 4 and retained on No. 200 sieve (.074 mm)

Silt & Clay 0.074 to 0.001 mm

ASTM D422 defines clay as smaller than 0.005 mm. Percent clay of each sample can be interpolated from the particle size distribution curves.

The particle size analysis samples were passed through a No. 10 sieve according to ASTM D421. A majority of the samples had the tendency to disaggregate into small clay clods, which were further ground using a mortar and pestle. The particle size analysis samples were dispersed for a period of 1 minute using apparatus A as described in the test method. Hydrometer calculations were performed assuming a specific gravity of 2.65.

ATTERBERG LIMITS

The liquid limit was determined using the one-point method.

If we can be of further service, please call.

Sincerely,

APPLIED GEOTECHNICAL ENGINEERING CONSULTANTS, INC.

Stephanie Merkley

Manager, Laboratory Services
