UNITED STATES
NUCLEAR REGULATORY COMMISSION

WASHINGTON, D.C. 20555-0001

March 14, 2001

MEMORANDUM TO: John W. Craig
Assistant for Operations
Office of the Executive Director for Operations

FROM: John T. Greeves, Director *John T. Greeves*
Division of Waste Management
Office of Nuclear Material Safety
and Safeguards

SUBJECT: UPDATED NUCLEAR REGULATORY COMMISSION
ANALYSIS THE DEPARTMENT OF ENERGY'S
FORMERLY UTILIZED SITES REMEDIAL ACTION
PROGRAM LIST

Staff previously provided an analysis of sites listed in a September 6, 2000, *USA Today* article on toxic exposure to nuclear weapons production workers. The analysis was forwarded to Commission staff in early October 2000. At about the same time, the U.S. Department of Energy (DOE) posted a list of sites involved in nuclear activities on their Environmental Management web page. The list, containing 577 sites, is known as the "1995 list of sites for possible involvement in nuclear weapons and nuclear energy related activities" and is also referred to as the "Formerly Utilized Site Remedial Action Plan" list or "FUSRAP" list. These 577 sites on the 1995 list were considered for inclusion into the FUSRAP program. Staff commenced review of the DOE "FUSRAP" list in October 2000.

The attached table and analysis of 156 sites summarizes our review of the "FUSRAP" list. The table, which we have provided to DOE staff, contains information only on those sites in the "FUSRAP" list that identified the U.S. Nuclear Regulatory Commission (NRC) as the cognizant agency. Because DOE and other agencies will continue, well into the future, to identify information in their files on all 577 sites on the "FUSRAP" list, our attached analysis will change (and possibly increase in size) as information is exchanged between the agencies and researched by our staff. As DOE completes its review of all sites on the "FUSRAP" list, we will continue to provide DOE with information from our files on sites that had NRC's or the Atomic Energy Commission's regulatory involvement. However, the staff believes that it is important to provide the Commission with this updated information now, due to public awareness of this issue. In addition, staff is compiling information regarding sites with decommissioning funding problems in response to SRM-SECY-00-0180. Finally, staff is coordinating with DOE about possibilities for creating a combined Federal database for all terminated sites.

**U.S. Department of Energy's Formerly Utilized Site
Remedial Action Plan List Review Summary**

Division of Waste Management (DWM) staff has reviewed the U.S. Department of Energy's (DOE) web posting titled "1995 list of sites reviewed for possible past involvement in the nuclear weapons related activities", which is also known as the Formerly Utilized Site Remedial Action Plan list or "FUSRAP list." This list contains names and rough locations of 577 sites that performed contract work in the past with Atomic Energy Commission (AEC)/DOE. Of the 577 listed sites, 156 were identified on the FUSRAP list as under U.S. Nuclear Regulatory Commission (NRC) regulatory cognizance. To avoid duplication of effort with DOE, the Department of Defense (DOD) and the U.S. Environmental Protection Agency (EPA), DWM staff conducted database searches only for sites that DOE identified were under NRC's cognizance (156 of 577). However, many sites on the FUSRAP list which were identified as "eliminated", could be NRC formally licensed sites but were not identified as such in the FUSRAP list. These sites are currently under review by DOE, but may be referred back to NRC when their review is completed.

The DOE list also included 151 out of the 153 sites mentioned on the *USA Today* article published on September 6, 2000. The two *USA Today* listed sites not found in the FUSRAP list are Phelps Dodge Copper in Bayway, NJ and Raytheon in Allston, MA. However, this is consistent with DOE records which indicate these sites likely never handled nuclear materials. Of the remaining 151 *USA Today* listed sites, only 36 were identified in the FUSRAP list as NRC cognizant. These 36 *USA Today* sites are incorporated in the attached list of 156 sites.

The following is the breakdown on the status of the 156 sites DWM staff reviewed:

- A. 111 out of the 156 sites are terminated (expired, retired or transferred to State) licenses (71%).
- B. 12 out of the 156 sites are active NRC licensees (8%).
 - 1. 2 out of 12 sites are currently undergoing decommissioning (1%).
 - a. **Westinghouse Electric**, Bloomfield, NJ completed decommissioning and is waiting for NRC to perform confirmatory survey.
 - c. **BabcoX & Wilcox Co.**, Parks Township, PA
 - 2. The remaining 10 out of 12 sites are active licensees not currently undergoing decommissioning.
- C. 6 out of 156 sites have Agreement State licensees (4%).
 - 1. **Marion Mill site**, Boulder, CO
 - 2. **MIT, Hood Bldg**, Cambridge, MA
 - 3. **Colombia University**, New York, New York
 - 4. **Horizons, INC.**, Cleveland, OH - Site Decommissioning Management Plan (SDMP) site transferred to the State in 1999, estimated completion in 2000.
 - 5. **Nuclear Materials**, Concord, MA -SDMP site transferred to the State on 3/97; active decommissioning.
 - 6. **Englehard Industries**, Plainville, MA - SDMP site transferred to the State on 1997, estimated completion in 2003.

- D. 4 out of 156 sites have been identified as EPA cognizant (3%).
1. Lindsay Light and Chemical, W. Chicago, IL
 2. U.S. Radium Corp., Orange, NJ
 3. Wolff-Alport and Co., Brooklyn, NY
 4. Palmerton Ore Buying Site, Palmerton, PA
- C. 19 of the 156 sites have been identified as DOE cognizant (12%).
1. 1 of the 19 sites has DOE documents identifying an NRC license (C-3448), which does not correspond to NRC records, **Penn Salt Manufacturing Co. (former Whitmarsh Research Laboratories)**. NRC records show other licenses (STB-0014, C-04937) in that area for Penn Salt Chemical, but not license C-3448 or at the address identified by DOE. (0.6%).
 2. The remaining 18 of the 19 sites are not NRC or Agreement State-cognizant, and DOE has agreed that it is their lead to followup (or identify another lead agency)
- D. 1 of the 156 sites has been identified as Tennessee Valley Authority cognizant (0.6%).
1. **Uranium Recovery Pilot Plant and Laboratory, Muscle Shoals, AL**
- E. 2 of the 156 the sites have been identified as Agreement State and active NRC licenses (1.3%)
1. **General Atomics, La Jolla, CA**
 2. **United Nuclear Corp, Church Rock, NM**
- F. 1 of the 156 sites has been identified as DOE and NRC cognizant (0.6%)
1. **West Valley Demonstration Project, Ashford/ West Valley, NY**

Follow-up:

DOE has established an online, secure database for cooperating Federal agency use, and continues to review their records. DOE intends to eventually establish an additional Internet-based database for public use. NRC coordination with Agreement States may be required to complete information regarding transferred sites and to make Agreement States aware of the public database. Finally, DOE plans a second database that will incorporate all decommissioned facilities that were licensed by Federal agencies.

Conclusion:

NRC has completed record reviews for all (100%) of the 156 sites on the DOE "FUSRAP List" that were identified as being under NRC's regulatory cognizance. No significant findings or lack of accountability were revealed. As DOE completes its review of all sites on the FUSRAP list, we will continue to provide DOE with information from our files on sites that had NRC's or the AEC's regulatory involvement, and we will continue to update our own analysis as more information becomes available.

Note: Some of the description fields are left blank due to no information available (from DOE), insufficient information in terminated license database, or the license is still active.

“FUSRAP” Sites Review (*NRC*)
