MEMORANDUM TO: Ledyard B. Marsh, Deputy Director
Division of Licensing Project Management
Office of Nuclear Reactor Regulation

FROM: Travis L. Tate, Lead Project Manager, Bulletin 2002-02 */RA/*
Division of Licensing Project Management
Office of Nuclear Reactor Regulation

SUBJECT: COMPLETION OF PLANT-SPECIFIC LICENSING ACTIVITIES
ASSOCIATED WITH BULLETIN 2002-02, REACTOR PRESSURE
VESSEL HEAD AND VESSEL HEAD PENETRATION NOZZLE
INSPECTION PROGRAMS

On August 9, 2002, the U.S. Nuclear Regulatory Commission (NRC) issued Bulletin 2002-02, "Reactor Pressure Vessel Head and Vessel Head Penetration Nozzle Inspection Programs," to the industry requesting that licensees operating pressurized water reactors (PWRs) provide information related to their reactor pressure vessel (RPV) head and vessel head penetration (VHP) nozzle inspection programs for their respective facilities. On February 11, 2003, the NRC issued an immediately-effective order to PWR licensees establishing interim inspection requirements for RPV heads. These enhanced inspection requirements supplement the existing inspection and other requirements in the American Society of Mechanical Engineers Boiler and Pressure Vessel Code and NRC regulations. As such, the NRC requirements imposed by the order supersede all activities associated with Bulletin 2002-02.

This memorandum documents completion of all plant-specific licensing activities associated with Bulletin 2002-02. PWR project managers will receive guidance to closeout all plant-specific TAC numbers and closeout of this multi-plant action will follow.
