comments: I have heard very disturbing news regarding NRC rules that allow the nuclear power industry to send metal into the recycling stream without first testing it for radioactivity. I think this is a terrible idea. I don't want to live in world where common household items which contain recycled metal also contain traces of radioactivity from power plants. Please do not place the power industry's desire to keep costs down at a higher priority than the public's right to be protected from a harm which can be easily avoided by testing this metal before it is unleashed into our lives
