comments: Please make your decisions in such a way that you could explain them to my four-year-old son. "There are these factories, producing energy, that also produce toxic poisons that get into our air, water, soil, food and other things. So we're working to shut down these factories, to find clean ways to make energy, and to find some way to neutralize the toxicity of the nuclear waste (what the poison is called).

Don't just shove the problem off onto our kids, to deal with in another generation.

"The earth was not given to us by our parents. It was loaned to us by our children."
