Dear Mr. John A. Grobe:

There are some transcripts that I would like to read. I would appreciate it if you could hurry along their editing and posting on your 0350 web page. They are the Lessons Learned public meeting, the December public meeting, and the Systems Health public meeting.

Different Field, Same Game

One organization problem pretty clear when the Davis-Besse reactor head problem was disclosed was the almost complete failure to identify problems, then fix them promptly. Now that trained people are inspecting selected systems, everything is identified. Problem solved. Or is it? How can experienced, trained people identify 970 plus problems, only to find none have enough merit to fix?

This is my eighteenth letter. It needs no reply.

Thank you,

Tom Gurdziel
