Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. NUCLEAR REGULATORY COMMISSION
Washington, D.C. 20555

Attention: Mr. James F. Miller, Chief
Operating Reactors Branch 3

Gentlemen:

DOCKET NOS. 30-266 AND 50-301
AUXILIARY FEEDWATER SYSTEM OPERABILITY
POINT BEACH NUCLEAR PLANT

On July 27, 1982, the Nuclear Regulatory Commission issued Amendment Nos. 62 and 67 to Facility Operating Licenses DPR-24 and DPR-27, respectively, for the Point Beach Nuclear Plant, Units 1 and 2. These amendments modified the limiting conditions for operation in the Technical Specifications with respect to auxiliary feedwater pump operations. These revisions to the Specification had been proposed in our letters dated April 27, May 5 and June 30, 1982.

In addition to these Technical Specifications changes with respect to auxiliary feedwater pump operability, the above referenced Wisconsin Electric letters also proposed, as requested by the Commission, Technical Specification changes regarding testing of automatic actuation circuitry for the auxiliary feedwater pumps. As discussed in your July 27, 1982 letter, these changes were not issued pending our notification to you of the completion of the circuitry modification necessary to permit such testing. This letter is to advise you that these modifications have been completed on both Point Beach units. The pending Technical Specification changes may, therefore, be issued at this time.

We have also advised Mr. Colburn of your Staff of the completion of these modifications. Should you have any questions concerning this matter, please contact me.

Very truly yours,
C. W. Fay A/46
Vice President, Nuclear Power

C. W. Fay
