OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

Dear NRC members:

Thank you for allowing replies by e-mail. I would have appeared in person, but we are leaving town tomorrow (Wed) for the Tucson area.

I appeared before the Diablo Independent Safety Committee in January to express an idea that I would like to share with you.

As the Diablo plant is built next to some very steep hills, I suggested that PG&E dig some deep caves in the hills and place the dry storage units there, instead outside the containment buildings. This would not only lend itself to better security, but also would aid in containment of the same if an accident would occur. I know the citizens of SLO County would surly feel safer with this solution.

Thank you for your attention in this matter,

Sincerely,

Val R. McClure
