**2002 ANNUAL EFFLUENT AND MONITORING REPORT (NRC)  
and  
SEMI-ANNUAL MONITORING REPORT (WDEQ)**

## **1.0 INTRODUCTION**

In accordance with Sections 12.1 and 12.6 of the NRC Source Material License No. SUA-1341, COGEMA Mining, Inc. (COGEMA) hereby submits the 2002 Annual Effluent and Monitoring Report. This document summarizes the required operational and environmental monitoring conducted at the Irigaray and Christensen Ranch from January 1 through December 31, 2002.

The monitoring data included in this document is also required by Section 5.10.1.1 of the 1996 License Renewal Application, in a Semi-Annual Monitoring Report to the Wyoming Department of Environmental Quality (WDEQ). The semi-annual report period is from July 1 through December 31, 2002, however, the entire year of data is given for annual report purposes.

## **2.0 OPERATIONAL SUMMARIES**

All mining activities ceased in June 2000, therefore, only groundwater restoration and related activities have since been conducted. During 2002, 33,284 pounds of uranium as U<sub>3</sub>O<sub>8</sub> were captured from groundwater restoration operations at the Christensen Ranch Project. This is well below the annual limit of 50,000 pounds, as per Section 10.5 of the NRC license. No uranium was dried or shipped during 2002.

The Irigaray facilities are unmanned but secured with door locks and locking gates at all outer perimeter access points. Security checks were conducted daily without incident.

Groundwater restoration status summaries are provided below for the Irigaray and Christensen Ranch Projects. The layout for each site is shown on the General Location Maps, located in Appendix 4.

### **2.1 Irigaray Project**

Groundwater restoration concluded in November 2001. Groundwater stabilization monitoring for Production Units 6 and 7 was completed in August and May 2002, respectively. A groundwater restoration report will be submitted to the WDEQ in early 2003, to request restoration approval of all nine Production Units at the Irigaray Project.

### **2.2 Christensen Ranch Project**

Five reverse osmosis (RO) units continued to process 1,000 gpm total (200 gpm each) of wellfield recovery water. A sixth RO was used to further concentrate (secondary treatment) the brine water from the five primary RO's. The final brine water was disposed by means of two Class 1 injection wells.

The reductant addition of sodium sulfide into the permeate injection water was discontinued in June 2002, due to its ineffectiveness. Beginning in November 2002, hydrogen sulfide gas (H<sub>2</sub>S) became the reductant used for restoration. Restoration status summaries for each Mine Unit are given below.

#### 2.2.1 Mine Unit 2

The RO filtration/permeate injection phase (RO phase) was suspended in March 2002, with a cumulative total of 10.8 PVD processed. Groundwater restoration will be continued with H<sub>2</sub>S addition.

#### 2.2.2 Mine Unit 3

The RO phase was suspended in August 2002, with a cumulative total of 15.5 PVD processed. Groundwater restoration will be continued with H<sub>2</sub>S addition.

#### 2.2.3 Mine Unit 4

The RO phase ended in November 2002 when recirculation began with the addition of hydrogen sulfide gas (H<sub>2</sub>S) as a reductant. The cumulative total processed during the RO phase was 8.36 PVD. Injection of RO permeate resumed in December 2002 so that it could be used as the carrier for H<sub>2</sub>S. This was necessary to reduce precipitation in the injection wells, which restricted flow. The cumulative total processed during the reductant phase was 0.37 PVD at the end of 2002.

#### 2.2.4 Mine Unit 5

The RO phase began in April 2002 and continued throughout the year, with a cumulative total of 3.4 PVD processed at the end of 2002.

#### 2.2.5 Mine Unit 6

The groundwater sweep phase began in September 2000 and continued throughout the year, with a cumulative total of 0.88 PVD processed at the end of 2002.

### **3.0 OPERATIONAL MONITORING**

#### 3.1 Groundwater Volumes Injected and Recovered

Groundwater restoration volumes injected and recovered from the wellfields at the Christensen Ranch Project are given in Table 1 of Appendix 1. The average recovery flow rates are also given in this table. The gallons were calculated by totalizing flow meters on the recovery and injection trunklines.

#### 3.2 Injection Manifold Pressures

Injection manifold pressures at the Christensen Project are limited to 140 psi during wellfield operations and 168 psi during maintenance tasks, as per License Section 11.1. Section 11.1 requires that the injection manifold pressures be recorded daily. COGEMA uses continuous chart recorders on the injection manifolds, which records pressure 24 hour per day. During 2002, several incidents were recorded in which the injection pressure exceeded the 140 psi operating limit and they are summarized below. Note that none of these incidents exceeded the 168 psi limit allowed for maintenance tasks, which is also the pressure used for mechanical integrity testing.

On June 19, 2002, the injection manifold pressure for wellfield Modules 4-1 and 4-2 exceeded the 140 psi operating limit. Module 4-1 exceeded the limit for approximately 4 hours with a maximum pressure of 148 psi, while Module 4-2 exceeded the limit for approximately 2 hours with a maximum pressure of 145 psi.

On June 29, 2002, the injection manifold pressure for wellfield Module 4-2 exceeded the 140 psi operating limit for approximately 41 hours, with a maximum pressure of 145 psi. The pressure increase occurred when a valve was closed to increase flow to MU-4 and MU-5.

On November 25, 2002, the injection manifold pressure for wellfield module 4-2 exceeded the 140 psi operating limit for approximately 3 hours, with a maximum pressure of 145 psi. The pressure increase was created by buildup of precipitants in the bore of the injection wells, which an operator noticed and corrected.

### 3.3 Waste Water Control

#### 3.3.1 Evaporation Ponds

Weekly inspections were conducted on the seven evaporation ponds at the Irigaray Project, along with the four evaporation ponds and one permeate storage pond at the Christensen Ranch Project. During 2001, no freeboard limits were exceeded and no leaks were detected. Sampling of the evaporation ponds is conducted on a quarterly basis and the sample analysis data are given in Table 2 of Appendix 1.

Further decommissioning of four small ponds (IR-1, 2A, 2B & 3) at the Irigaray Project (5I7 R&D Site), was conducted in 2002. Final soils surveys and samples taken over the entire area, confirmed that all plots met the cleanup limits approved in the Decommissioning Plan. During 2003, COGEMA plans to conduct final reclamation of these ponds by back filling, grading and seeding.

#### 3.3.2 Disposal Wells

Two Class I injection wells are located at the Christensen Ranch Project which are licensed by the WDEQ Permit Number UIC 00-340 for industrial wastes. During 2002, a total of 41,021,889 gallons of restoration brine water was injected into disposal well Cogema DW No.1 and 34,661,767 gallons were injected into disposal well Christensen 18-3. Quarterly reports were submitted to the WDEQ containing required water quality, water quantity and well pressure data. No limits were exceeded at either well during 2002.

### 3.4 Well Integrity Testing

Well integrity testing results are reported to the WDEQ by phone on a quarterly basis and in a written report semi-annually. The results for the first half of 2002 were given in the WDEQ annual report (August 2002). No wells were integrity tested during the second half of 2002.

## **4.0 ENVIRONMENTAL MONITORING**

The environmental monitoring locations are given on the Environmental Monitoring Station Locations map located in Appendix 4. The layout of each site, including the locations of monitor/trend wells, ponds, surface discharges, and disposal wells is given in the General Location Maps, also located in Appendix 4.

## 4.1 Groundwater Monitoring

### 4.1.1 Wellfield Monitor and Trend Wells

Groundwater quality at both projects is monitored by sampling 327 monitor or trend wells surrounding or within the wellfields. Sampling frequency varies for these wells. Monitor wells on excursion status are sampled weekly. Monitor wells not on excursion status and the trend wells are sampled monthly until restoration is complete. These wells are then sampled quarterly during post-restoration stabilization monitoring and thereafter, if needed.

Sample analysis results along with the water level elevations for 2002 are contained in Appendix 2. Note that a monthly sample could not be collected from CR monitor well 5MW54 during December because of its very low water level.

Ten monitor wells were reported on excursion status during 2002. Since detailed excursion status reports are submitted monthly to the WDEQ and quarterly to the NRC, only a summary of these wells is given below. Note that two of these wells were no longer on excursion status at the time of this report (February 2003).

Interior Shallow Sand Monitor Well SSM3 - Irigaray Production Unit 2  
Date of Initial Excursion: August 30, 1996

Interior Shallow Sand Monitor Well SSM18 - Irigaray Production Unit 8  
Date of Initial Excursion: September 13, 1996

Interior Shallow Sand Monitor Well SSM40 - Irigaray Production Unit 8  
Date of Initial Excursion: August 16, 1996

Interior Shallow Sand Monitor Well SSM41 - Irigaray Production Unit 4  
Date of Initial Excursion: November 19, 1998

Interior Shallow Sand Monitor Well SSM42 - Irigaray Production Unit 3  
Date of Initial Excursion: October 10, 1990

Interior Shallow Sand Monitor Well SSM43 - Irigaray Production Unit 1  
Date of Initial Excursion: October 11, 1989

Interior Shallow Sand Monitor Well DM10 - Irigaray Production Unit 6  
Date of Initial Excursion: February 2, 1994

Perimeter Ore Zone Monitor Well 5MW8 - Christensen Mine Unit 5  
Date of Initial Excursion: December 16, 2002

Perimeter Ore Zone Monitor Well 5MW54 - Christensen Mine Unit 5  
Date of Initial Excursion: November 19, 2002  
Date of Excursion Termination: February 3, 2003

Perimeter Ore Zone Monitor Well 5MW66 - Christensen Mine Unit 5  
Date of Initial Excursion: August 21, 2001  
Date of Excursion Termination: January 14, 2002

#### 4.1.2 Regional Ranch Wells

Annual groundwater samples were collected from 5 ranch wells near the Christensen Ranch Project and 1 ranch well near the Irigaray Project. The samples were analyzed for uranium along with Th-230, Ra-226, Pb-210 and Po-210 and the data are given in Table 3. All radionuclides were low in concentration or not detectable, as is normal.

#### 4.2 Surface Water Monitoring

Willow Creek is the only source of surface water present within and adjacent to the permit boundary of both the Irigaray and Christensen Ranch Projects. Willow Creek is an intermittent stream and is sampled annually in the spring, if flow is available. Three sample locations are designated at both sites; upstream, downstream and within the permit boundary. The Powder River is also sampled annually at the Brubaker Ranch, which is approximately 4.5 miles downstream from its confluence with Willow Creek. Analysis data for both chemical parameters and radionuclides are given in Table 4. All radionuclides were low in concentration or not detectable, with no exceedances of the NRC 10 CFR 20, Appendix B, effluent limits.

#### 4.3 Surface Discharge Monitoring

A surface discharge outfall is located at each project for disposal of treated groundwater generated by restoration activities. The outfalls are licensed with the U.S. Environmental Protection Agency under National Pollutant Discharge Elimination System (NPDES) permits, issued by the WDEQ. During 2002, a total of 15,552,640 gallons were discharged at the Christensen Ranch Project (Permit No. WY0033642, discharge 002). The surface discharge at the Irigaray Project was not used during 2002. Routine sampling is conducted on a weekly, monthly and quarterly basis as designated by the NPDES permits. The sample analysis data for 2002 are given in Table 5. No NPDES permit limits were exceeded.

In addition, quarterly samples are also analyzed for radionuclide activity (uranium, Ra-226, Th-230, Po-210 and Pb-210) and compared to the NRC 10 CRF 20, Appendix B effluent limits. This analysis data is also given in Table 5. Most values are low or not detectable, however, one exceedance of an effluent limit occurred. In January 2002, the Lead-210 concentration was 1.6 E-8 pCi/l, compared to the effluent limit of 1.0 E-8 pCi/l, however, the annual average of all four Lead-210 samples was < 7.8 E-8 pCi/l.

Periodic exceedances of the Lead-210 effluent limit have been documented in the Effluent Monitoring Reports for 2000 and 2001. These reports stated that surface discharge water at the Christensen Ranch Project contains elevated concentrations of radon gas, which is the source of Lead-210. Note that Lead-210 is the first progeny from radon with a half-life of greater than 30 minutes (21 years). By letter dated July 31, 2001, COGEMA responded to the NRC's request to demonstrate if the surface discharge of restoration fluid complies with the NRC public dose limit in 10 CFR 20.1301 for all five of the radionuclides. The report stated "In summary, COGEMA contends that the restoration effluent discharged at Irigaray and Christensen will not cause an exceedance of the public dose limit in 10 CFR 20.1301, when realistic scenarios are considered".

#### 4.4 Air Monitoring

##### 4.4.1 Radon

Environmental monitoring of radon was eliminated beginning 2002, as per the NRC approved Decommissioning Plan.

The radon release estimate for 2002 is calculated below for restoration operations. This estimate is based upon the release rates given in the Calculation Of Annual Radon Emissions tables, of the 1996 License Renewal Application. Table 7.3(A)-3, Christensen Ranch, lists a restoration release rate of 258 Ci/year at a flow rate of 500 gpm (or 0.516 Ci per gpm, per year).

(986 gpm annual average recovery) (0.516 factor) = 509 Total Curies of Radon

##### 4.4.2 Dryer Stack Emissions

Dryer stack emissions monitoring was eliminated beginning 2002, as per the NRC approved Decommissioning Plan. Note that the dryer did not operate during 2002.

##### 4.4.3 Airborne Radionuclides

During dryer operation, continuous airborne radionuclide sampling is required at specified environmental locations at the Irigaray Project. However, since no drying occurred during 2002, no sampling was conducted.

#### 4.5 Gamma Radiation Monitoring

Environmental monitoring of gamma radiation was eliminated beginning 2002, as per the NRC approved Decommissioning Plan.

### **5.0 OTHER INFORMATION REQUIRED BY SECTION 12.6 OF THE NRC LICENSE**

#### 5.1 ALARA Audit

The 20002 ALARA audit was conducted by Tom Hardgrove the RSO for Pathfinder Mines Corporation. A copy of the audit report is given in Appendix 3. No increasing dose trends or other concerns were noted.

#### 5.2 Land Use Survey

The primary use of surrounding lands at both the Irigaray and Christensen Ranch Projects continues to be rural ranching. Cattle and sheep graze these lands, but are fenced from the evaporation ponds and wellfields.

The secondary use of surrounding lands continues to be oil production from wells dispersed throughout the region. The closest oil well at the Christensen Ranch Project is located approximately one third of a mile west of the Christensen plant. The closest oil well at the Irigaray Project is located approximately one half mile east of the Production Unit 9 wellfield. No new oil wells have been drilled in close proximity of the projects during 2002.

Another secondary use of surrounding lands involves drilling methane gas wells into the underground coal seams for exploratory purposes and/or to establish claims. Three inactive gas wells are located within a half-mile of the Mine Unit 6 wellfield at the Christensen Project. No new wells have been drilled in close proximity of either project during 2002.

The nearest residence to the Irigaray plant is 4 miles to the north and the nearest residence to the Christensen plant is 3 miles to the southeast. Both are ranch housing with a population of 3 or less. No new residences have been added within 5 miles of either site since the regional demography was evaluated in Section 2.3.1 of the 1996 License Renewal Application.

### 5.3 SERP Summary

COGEMA's Safety and Environmental Review Panel (SERP) completed one safety and environmental review (SER) during 2002, as per License Section 9.4 (C).

#### 5.3.1 SER 2002-1

The SERP evaluated a proposed well repair method for wells which failed integrity testing. It was determined that the proposal did not require a SER, since repair methods are not specified in any licensing document and thus no changes were needed. The SERP noted that the only limiting criteria is that repaired wells must pass integrity testing prior to use.

The SERP also evaluated a proposed limited use of wells which failed integrity testing. The SERP concluded that the proposal may conflict with the NRC License and EA, since they state that COGEMA will plug and abandon any well which cannot be repaired and pass integrity testing. No mention is made in any license document concerning optional uses for failed wells. The SERP recommended that if the WDEQ accepted the proposed use, the NRC be contacted to determine if a license amendment is needed. However, the WDEQ did not accept the proposal and it was dropped from further consideration.

Table 3

COGEMA Mining, Inc. - Irigaray and Christensen Ranch Projects  
 2002 Annual Report  
 Sample Type: Regional Groundwater (ranch wells) - Annual Samples

## Sample Location: Christensen Ranch House #3

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	16.5 E-9
Thorium-230	< 0.2 E-9
Radium-226	0.7 +/- 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

## Sample Location: Christensen Middle Artesian

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	2.1 E-9
Thorium-230	< 0.2 E-9
Radium-226	< 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

## Sample Location: Christensen Ellendale #4

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	1.1 E-9
Thorium-230	< 0.2 E-9
Radium-226	< 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

## Sample Location: Christensen Del Gulch Lower #13

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	2.8 E-9
Thorium-230	< 0.2 E-9
Radium-226	< 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

## Sample Location: Christensen Willow Corral #32

Radionuclide	August 22, 2002 ( <u>uCi/ml</u> )
Uranium	< 0.2 E-9
Thorium-230	< 0.2 E-9
Radium-226	< 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

## Sample Location: Christensen First Artesian Well #1

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	Not Available
Thorium-230	Pump Down
Radium-226	
Lead-210	
Polonium-210	

## Sample Location: Irigaray Willow # 2

Radionuclide	June 18, 2002 ( <u>uCi/ml</u> )
Uranium	< 0.2 E-9
Thorium-230	< 0.2 E-9
Radium-226	< 0.2 E-9
Lead-210	< 2.7 E-9
Polonium-210	< 2.7 E-9

LLD  
(uCi/ml)

0.2 E-9 Uranium  
 0.2 E-9 Thorium-230  
 0.2 E-9 Radium-226  
 2.7 E-9 Lead-210  
 2.7 E-9 Polonium-210
