Rich,

First, note that this is the proprietary version of the report, so be careful where you send it.

With respect to hard copies, we have 3 now. They are black and white, and so is the PDF file. So, in terms of final quality, xeroxing the hard copies or lazer printing the PDF version would be the same. If you want 2-sided, tape bound versions, I'll check with REPRO whether they need to work from a 2-sided hard copy or will rectify pages from the PDF file. How many copies do you want?

Steve

 Steve:

Can you get some hard copies made?

 Rich,

Hopefully, the attachment is stuck tightly to this e-mail.

Take a look at results in section 4.7 of the attached EPRI report. Note the erosion rate decreases in the crevices as the leak rate increases.

Steve
