Subject: Re: Format for Phase 3 Analyses

Pete and others,

I looked at the attached file, and saw a list of content, NOT A FORMAT. What it says is

"c Phase 3 Analysis (if necessary)

"Concisely address each of the analysis aspects that follow.

"PRA tools used.

"Affected sequences

"Influential assumptions:

"Sensitivity of results to each influential assumption:

"Contributions of greatest uncertainty factors and impact on assumptions:

"Previous similar analyses if applicable)

"Proposed preliminary or final color."

For a complicated analysis like the one I'm doing for Davis-Besse or the one I did for IP2 SGTE, forcing the rationale and analysis into the order of the specified list of contents is guaranteed to make it unreadable. Since the 0609.01 doesn't say this is the format, I don't intend to make it my format. If others insist, then I propose we write a readable risk-significance report and then reference it in an abstract that is force-fit to follow this content list format

Steve

Please refer to the attached file. The attached manual chapter contains a brief outline on the general format for Phase 3 analyses. We need to use with format when documenting our analyses. This will enable the Regions to quickly incorporate our work into their SERP packages and will standardize our documentation with the Regions. I recommend contacting the SRA in the region we are supporting prior to documentation to ensure their needs are met. If you have any questions please call or stop by.
