Subject: Re Blade article for LLTF and 0350 mtgs

The Blade article is in error where it states that Davis-Besse is the second case of circumferential nozzle cracking found in the U.S. I don't have the data in front of me, but I remember about half of the B&W units have had circ cracks, and Davis Besse was the last to look. In December, I had estimated a 50-50% chance that Davis-Besse would find a circ crack, based on other B&W plant findings by then.

[Laura, please forward to the 0350 Panel mailing list. My address book still does not recognize that group, so I can't reply to it.]
