Event Details

ABSTRACT: The licensee reported the loss of an NRD static elimination device containing 370 MBq (10 mCi) of Po-210. The static elimination device (model P-2021-8201, serial #116762) is an air gun with an anti-static nozzle used to remove debris from static sensitive areas in and around electronic test equipment. The device was shipped to the licensee from NRD, LLC, of Grand Island, New York, in a package with a larger ionization device. The larger device was removed from the package and installed, but the smaller device went unnoticed. The licensee determined that an employee later emptied the package to use the box for another purpose. To prevent recurrence, the licensee modified their procedures to ensure that all packages containing nuclear devices will be reconciled against the applicable shipping papers upon receipt. Also, these devices will be immediately installed or placed in secure storage. The shipping papers will be forwarded to the device program manager and the device inventory records will be updated accordingly.
