Subject: NRC Request for Weld Data Sheets for RVCH

Jon-

On October 11 you sent me an e-mail requesting the weld data sheets for three welds on the RVCH (weld # 8: cladding, weld # 25: j-groove, and weld # 13: buttering under the cladding). On October 15 you added an additional weld (weld #1: manually applied cladding). NRC Research was requesting this information.

We have looked into obtaining these four weld data sheets and determined we will need to get them from B&W's Mt. Vernon, Indiana facility. Since this facility is not associated with Framatome, we will need to obtain these by means of a Purchase Order. In order to make the request complete and not have to process another Purchase Order, can you please check with NRC Research to ensure these are all of the weld data sheets they will be requesting? Thanks.

-Dale Wuokko
