

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

October 20, 1992

TO: All Holders of operating Licenses or Construction Permits for  
Nuclear Power Reactors

SUBJECT: OFFICE OF NUCLEAR REACTOR REGULATION REORGANIZATION  
(GENERIC LETTER 92-07)

This is to inform you that, effective October 4, 1992, the Office of Nuclear Reactor Regulation (NRR) was reorganized. The new organization better aligns management of technical activities within the Associate Director for Inspection and Technical Assessment (ADT), transfers some functions to the Associate Director for Projects (ADP), and transfers the responsibility for conducting environmental reviews from ADP to the Associate Director for Advanced Reactors and License Renewal (ADAR).

Some Senior Executive Service (SES) positions have been realigned. The number of technical divisions remains at six. Responsibility for generic activities, event followup and standard technical specifications has been realigned from ADT to ADP. The organizational change includes realigning six branches, creating a new branch, and consolidating environmental functions into a single branch level organization. Individual assignments and tasks are essentially unchanged. The new NRR organization chart which depicts the new structure and manager reporting relationships is enclosed.

This generic letter contains no information collection requirements and therefore is not subject to the requirements of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 et seq.).

SUBJECT: OFFICE OF NUCLEAR REACTOR REGULATION REORGANIZATION  
(GENERIC LETTER 92- )

The purpose of this Generic Letter is to inform you that, effective October 4, 1992, the Office of Nuclear Reactor Regulation (NRR) was reorganized. Although the previous NRR organization was basically sound, some organizational realignments were needed to more effectively provide for the Office's dual focus role in the oversight of operating reactors and the review of advanced plant and license renewal activities.

The reorganization has realigned a number of NRR branches and reporting relationships, but individual assignments and tasks are essentially unchanged. The organizational change includes realigning six branches, creating a new branch, and consolidating environmental functions into a single branch level organization. The number of technical divisions remains at six. Responsibility for generic activities, event followup and standard technical specifications has been realigned from the Associate Director for Inspection and Technical Assessment (ADT) to the Associate Director for Projects (ADP). The new organization better aligns management of technical activities within ADT, transfers some functions to ADP, and transfers the responsibility for conducting environmental reviews from ADP to the Associate Director for Advanced Reactors and License Renewal (ADAR). Some Senior Executive Service (SES) positions have been realigned. The new NRR organization chart which depicts the new structure and manager reporting relationships is attached.

The organizational change will provide significant benefits and enable NRR to conduct its mission more effectively by: consolidating certain functions within individual divisions for more effective resolution of technical issues and conduct of reviews, improving coordination of efforts to oversee operating plants, and yielding a better alignment between headquarters and field activities.
