OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

Dear Chairman,

As a father and a life-long resident of the central coast I am very concerned about our environment and what takes place at Diablo Canyon Nuclear Power Plant.

In response to the study prepared by the NRC warning of a 500-mile radiation spread in the event of a catastrophic melt down in the spent fuel pool of a nuclear plant, I am amazed that it is not mandatory that the spent fuel pool, as well as all high level rad waste, is not stored in a structure similar to the containment domes enclosing the reactors or underground with the same necessary containment requirements.

September 11, 2001 has proven to all of us that we must take all necessary precautions possible to protect our environment as well as ourselves. God help us if we lose sight of this and let human/corporate greed override our better judgement.
