

SECTION XIV

HIGH-LEVEL WASTE REPOSITORY INSPECTOR NRC INSPECTOR QUALIFICATION JOURNAL

Applicability

This NRC Inspector Qualification Journal implements NRC Manual Chapter 1246, Appendix A, Section XIV, by establishing the minimum training requirements for personnel assigned to perform safety inspection activities regarding a High-Level Waste (HLW) Repository. The Qualification Journal must provide traceable documentation to show that minimum requirements are met for each inspector.

The NRC Inspector Qualification Journal consists of a series of qualification guides and signature cards. Each signature card is used to document task completion, as indicated by the appropriate signature blocks. Each signature card has a corresponding qualification guide that establishes the minimum knowledge levels or areas of study that must be completed for each signature card.

Most of the qualification guides are divided into sections. The review sections of the qualification guides will identify references with general application to the inspector's qualification. The inspector is expected to have a general familiarity with these references. Other sections of the qualification guides will identify specific references that have direct application to an inspection or licensing discipline. The inspector is expected to demonstrate detailed knowledge of the inspection or licensing discipline-specific references.

To support the review of upper-tier documents, programs, and policies, the inspector's First Line Supervisor may assign one or more specific non-HLW power reactor facilities and/or disposal sites as reference facilities. For a headquarters inspector, the First Line Supervisor should collaborate with NRC Regional Office to set up similar qualification assignment. The selection of a reference facility is intended to provide the inspector's management with the ability to tailor the qualification process to the experience and training level of the inspector, and to meet the inspection and licensing needs of NRC. The use of specific real-world material will reinforce the qualification process.
