8 Requirement (continued)

"8.4.2: General - The identification of Yucca Mountain Project data shall include a reference to the origin of the data (test, experiment, report, publication, etc.) and an indication of the QA Level assigned to the activity which produced the data."

"8.4.2.1 Control measures shall be established and implemented to assure that Yucca Mountain Project data are properly identified. These measures shall include verification of the identification of such data prior to release for use for data resulting from QA Level I or II activities."

9 Deficiency (continued)

activities which produced that data, were not identified, even though these products have been released for use.

2. The Reference Informance Base item 1.2.9, of Version 4 of the RIB (RIB Control Number DR-22) states that the item (which consists of IGIS products CALO249, CALO250, CALO251), were produced under WBS Element 1.2.4.2.1.1.S as a QA Level I activity. This is incorrect, because these IGIS products were produced from an activity at the IGIS under WBS Element 1.2.1.3.2.S, which was assigned a QA Level of III.

10 Recommended Actions (continued)

2. Correct the RIB.

14 Remedial/Investigative Action(s)(cont'd.)

about the quality of the associated raw data and the quality level of the procedures used in their creation. In many cases the amount of work required for this evaluation would equal or exceed the amount of work required to regenerate the product. In some cases the amount of documentation which currently exists is inadequate to retrace the original work. For these reasons memo will be issued which removes any assertion regarding the conformity of previous products and reference models to QA program requirements cited in Section 8 above. This memo will be sent to all TPOs. It will request that PIs which rely upon previous IGIS products for existing or future work submit a new work request form indicating those products which are essential to their work and must be verified. These products will be evaluated by the IGIS staff for compliance to current QA and documentation requirements. Only those products which are verified in this fashion will exist under the approved QA program.

Deficiency 1. These products will no longer carry an assertion of any QA status (see above discussion). Lane Yarrington will issue a memo to the requestor of each product (CAL0342 and CAL0343) to that effect.

Deficiency 2. A change request to the RIB will be initiated by Joseph Schelling to make the needed editorial changes and to better document the origin of the data.
