Document_Title: NUREG-1768, United States Nuclear Regulatory Commission Package Performance Study Test Protocols.

Comments: Chief, Rules Review and Directives United States Nuclear Regulatory Commission MS - T-6-D-59 Washington, DC 20555-0001

Re: NUREG-1768, United States Nuclear Regulatory Commission Package Performance Study Test Protocols.

Dear NRC Rules Chief:

As the Nuclear Regulatory Commission has issued a report called "United States Nuclear Regulatory Commission Package Performance Study Test Protocols" and is requesting comments. I am doing so.

I am requesting that the NRC do full scale testing to failure for every cask design proposed not arbitrary standards.

Full scale testing must be expanded to include explosive and missile attacks and extra regulatory thermal testing to establish temperature failure thresholds.

The NRC should include puncture, crushing force and deep immersion. Full scale casks must be tested not scale models.

The only way to reduce the risk of accidents during the transport of nuclear waste is to not ship nuclear waste! This is a risk that this country does not need in these days of terrorist threats. The costs economically and physically could be potentially devastating and risks we can ill afford.

Please give this your closest consideration. I look forward to your response.

Thank you.

Sincerely, Karen Johnson 1362 Waterloo Lane, #36 Gardnerville, NV 89410-5326
