

SUMMARY OF INFORMATION COLLECTION REQUEST

Title: 10 CFR 50.69, "Risk-Informed Categorization and Treatment of Structures, Systems and Components," Proposed Rule

Current Burden/Responses: Part 50: 4,735,114 hours/8,078 responses
Part 21: 12,565 hours/170 responses
NRC Form 366: 56,500 hours/1,130 responses

Proposed Burden/Responses: Part 50: 4,739,630 hours/8,068 responses
Part 21: 12,375 hours/168 responses
NRC Form 366: 56,300 hours/1,126 responses

Frequency of Response: On occasion

Reasons for Changes in Burden/Responses:

The rule would decrease the burden slightly for existing sections where the information collection requirements would be moved to the new section 50.69 for those licensees choosing to implement the rule provisions. Overall, the rule will result in a burden increase of 4,126 hours for 10 CFR Part 50. This burden is associated with the one-time cost to obtain NRC approval to implement section 50.69 and to conduct the required categorization. Upon implementation of section 50.69, a small savings in burden is expected.

Level of Concurrence: Director
Division of Regulatory Improvement Programs
Office of Nuclear Reactor Regulation

Recordkeeping Requirements in Accordance with the Retention Periods for Records Rule:
Recordkeeping retentions are in accordance with standard retention periods.

Search of the Information Requirements Control Automated System (IRCAS):
IRCAS was searched on April 18, 2003. No duplication was found.

Abstract:

NRC is proposing to amend Part 50 to allow licensees to implement alternative less prescriptive and burdensome "special treatment" requirements for structures, systems, and components of low safety-significance. The alternative would require licensees to conduct on-going evaluations and maintain records of categorization to ensure that safety standards are maintained.
