Subject: Re: Indian Point Probabilistic Safety Study
Place: PDR@nrc.gov

NRR release [The NRR review team has reviewed the subject request (1982 PRA studies for Indian Point 2 & 3) and determined that the document should not be released. It should be noted that the amount of "sensitive" material is relatively small and we may be able to provide a redacted version (similar to what we would do for a FOIA request). Please give me (Bill Reckley, x2429) a call and we can discuss possible approaches if the requester wants us to pursue a further review and redaction effort.

This may also be an opportunity to discuss with the OEDO or others whether or not we need to apply the same threshold to documents requested through the PDR that we are applying to general availability via the web site or ADAMS.

I had a call from David Lochbaum who wants to look at this document. I am attaching the citations from BRS for review.
