TENNESSEE VALLEY AUTHORITY
TOXICITY TEST REPORT

INTRODUCTION / EXECUTIVE SUMMARY

Report Date: May 13, 2003

1. Facility / Discharger: Watts Bar Nuclear Plant / TVA
2. County / State: Rhea / Tennessee
3. NPDES Permit #: TN 0020168
4. Type of Facility: Nuclear-Fueled Electric Generating Plant
5. Average Flow (MGD): 0.255
6. Receiving Stream: Unnamed tributary to Yellow Creek
7. 1Q10: 0.0
8. Outfall Tested: 112
9. Dates Sampled: April 13 – 18, 2003
10. Average Flow on Days Sampled (MGD): 0.5690, 0.3895, 0.6537
11. Pertinent Site Conditions: No unusual conditions reported. (Production / operation data will be provided upon request).
12. Test Dates: April 15 - 22, 2003
13. Test Type: Short-term Chronic Definitive
14. Test Species: Fathead Minnows (*Pimephales promelas*)
    Daphnids (*Ceriodaphnia dubia*)
15. Concentrations Tested (%):
    Outfall 112: 6.25, 12.5, 25, 50, 100
    Pimephales promelas: UV treated Outfall 112: 6.25, 12.5, 25, 50, 100
16. Permit Limit Endpoint (%): Outfall 112: $IC_{25} = 100\%$
17. Test Results: Outfall 112: *Pimephales promelas:* $IC_{25} = 82.5\%$
    Ceriodaphnia dubia: $IC_{25} > 100$
    UV treated Outfall 112: *Pimephales promelas:* $IC_{25} > 100$

Phone #: (256) 386-2755

22) Notes: Outfall 112 samples collected April 13 - 18, 2003, showed no toxic effects to daphnids. The resulting IC_{25} value was > 100 percent.

Bacterial growth was observed on the gills of minnows exposed to non-treated effluent from Outfall 112. This pathogenic growth was likely the cause of mortality in the effluent. The resulting IC_{25} value was 82.5 percent.

Fathead minnows were also exposed to UV treated Outfall 112 samples since fish pathogens present in upstream water have been the suspected cause of interference (anomalous dose response and high variability among replicates) in previous toxicity testing at Watts Bar Nuclear Plant. Survival was 100% in all effluent concentrations with two-minute exposure to UV light prior to introduction of test organisms. These results suggest that fish pathogen interference is a likely cause of minnow mortality in the effluent. The resulting IC_{25} value for UV-treated effluent was > 100 percent for fathead minnows.

METHODS SUMMARY

Samples:

1. Sampling Point: Outfall 112

2. Sample Type: Composite

3. Sample Information:

Sample ID	Date (MM/DD/YY)/ Time (EST) Collected	Date (MM/DD/YY)/ Time (EST) Received	Arrival Temp. (°C)	Initial TRC* (mg/L)	Date (MM/DD/YY)/ Time (EST) Used
112	04/13/03 0830 to 04/14/03 0730	04/15/03 0936	0.5†	<0.10	04/15/03 1420 0416/03 1432
112	04/15/03 0930 to 04/16/03 0830	04/17/03 0942	0.2†	<0.10	04/17/03 1426 04/18/03 1326
112	04/17/03 0828 to 04/18/03 0728	04/19/03 0958	0.4†	<0.10	04/19/03 1337 04/20/03 1350 04/21/03 1356

*TRC = Total Residual Chlorine

†Collected in 2.5 and 5-gallon cubitainers. Temperature was measured in each cubitainer upon arrival

4. Sample Manipulation: Samples from Outfall 112 were warmed to test temperature (25.0 ± 1.0°C) in a warm water bath.

Aliquots of Outfall 112 were UV-treated through a 40-watt Rainbow Lifeguard® UV Sterilizer for 2 minutes.

	Pimephales promelas	*Ceriodaphnia dubia*
Test Organisms:		
1. Source:	Aquatic BioSystems, Inc.	In-house Cultures
2. Age:	23-26 hours old	< 24-hours old
Test Method Summary:		
1. Test Conditions:	Static, Renewal	Static, Renewal
2. Test Duration:	7 days	Until at least 60% of control females have 3 broods
3. Control / Dilution Water:	Moderately Hard Synthetic	Moderately Hard Synthetic
4. Number of Replicates:	4	10
5. Organisms per Replicate:	10	1
6. Test Initiation: (Date/Time)		
Outfall 112	04/15/03-1420 EDT	04/15/03-1319 EDT
UV Treated Outfall 112	04/15/03-1403 EDT	
7. Test Termination: (Date/Time)		
Outfall 112	04/22/03-1333 EDT	04/22/03-1236 EDT
UV Treated Outfall 112	04/22/03-1314 EDT	
8. Test Temperature: Outfall 112:	Mean = 25.3°C (24.9-25.7°C)	Mean = 24.9°C (24.3-25.8°C)
Test Temperature: UV-Treated Outfall 112:	Mean = 25.2°C (24.6-25.8°C)	

9. Physical / Chemical Measurements: Alkalinity, hardness, total residual chlorine, and conductivity were measured at the laboratory in each 100% sample. Daily temperatures were measured in one replicate for each test concentration. Pre- and post-exposure test solutions were analyzed daily for pH and dissolved oxygen.

10. Statistics: Statistics were performed according to methods prescribed by EPA using ToxCalc version 5.0 statistical software (Tidepool Scientific Software, McKinneyville, CA).

TOXICITY TEST RESULTS (see Appendix B for Bench Sheets)

1. Results of a *Pimephales promelas* (Genus species) Chronic/ 7-day Toxicity Test. (Type / Duration)

Conducted April 15 - 22, 2003 using effluent from Outfall 112.

Test Solutions (% Effluent)	Percent Surviving (time interval used – days)						
	1	2	3	4	5	6	7
Control	100	100	100	100	100	100	100

REFERENCE TOXICANT TEST RESULTS (see Appendix A and C)

Species	Date	Time	Duration	Toxicant	Results (IC_{25})
Pimephales promelas	April 15, 2003	1337	7-days	KCl	562.1 mg/L
Ceriodaphnia dubia	April 08, 2003	1526	7-days	NaCl	1025.5 mg/L

SUMMARY / CONCLUSIONS

Outfall 112 samples collected April 13 - 18, 2003, showed no toxic effects to daphnids. The resulting IC_{25} value was > 100 percent.

Bacterial growth was observed on the gills of minnows exposed to non-treated effluent from Outfall 112. This pathogenic growth was likely the cause of mortality in the effluent. The resulting IC_{25} value was 82.5 percent.

Fathead minnows were also exposed to UV treated Outfall 112 samples since fish pathogens present in upstream water have been the suspected cause of interference (anomalous dose response and high variability among replicates) in previous toxicity testing at Watts Bar Nuclear Plant. Survival was 100% in all effluent concentrations with two-minute exposure to UV light prior to introduction of test organisms. These results suggest that fish pathogen interference is a likely cause of minnow mortality in the effluent. The resulting IC_{25} value for UV-treated effluent was > 100 percent for fathead minnows.

Appendix A

ADDITIONAL TOXICITY TEST INFORMATION

SUMMARY OF METHODS

1. *Pimephales promelas*

   Tests were conducted according to EPA-821-R-02-013 (October 2002) using four replicates, each containing ten test organisms, per treatment. Test vessels consisted of 400-mL polypropylene beakers, each containing 250-mL of test solution.

2. *Ceriodaphnia dubia*

   Tests were conducted according to EPA-821-R-02-013 (October 2002) using ten replicates, each containing one test organism, per treatment. Test vessels consisted of 30-mL polypropylene cups, each containing 15-mL of test solution.

DEVIATIONS / MODIFICATIONS TO TEST PROTOCOL

1. *Pimephales promelas*

   None

2. *Ceriodaphnia dubia*

   None

DEVIATIONS / MODIFICATIONS TO PRETEST CULTURE OR HOLDING OF TEST ORGANISMS

1. *Pimephales promelas*

   None

2. *Ceriodaphnia dubia*

   None

PHYSICAL AND CHEMICAL METHODS

1. Regents, Titrants, Buffers, etc.: All chemicals were certified products used before expiration dates (where applicable).

2. Instruments: All identification, service, and calibration information pertaining to laboratory instruments is recorded in calibration and maintenance logbooks.

3. Temperature was measured using EPA Method 170.1.

4. Dissolved oxygen was measured using EPA Method 360.1.

5. The pH was measured EPA Method 150.1.

6. Conductance was measured EPA Method 120.1.

7. Alkalinity was measured using EPA Method 310.1.

8. Total Hardness was measured EPA Method 130.2.

9. Total residual chlorine was measured using EPA Method 330.5.

QUALITY ASSURANCE

Toxicity Test Methods: All phases of the study including, but not limited to, sample collection, handling and storage, glassware preparation, test organism culturing/acquisition and acclimation, test organism handling during test, and maintaining appropriate test conditions were conducted according to the protocol as described in this report and EPA-821-R-02-013. Any known deviations were noted during the study and are reported herein.

REFERENCE TOXICANT TESTS (See Appendix C for control chart information)

1. Test Type: 7-day chronic tests with results expressed as IC_{25} values in g KCl or NaCl.

2. Standard Toxicant: Potassium Chloride (KCl crystalline) for *Pimephales promelas.*
   Sodium Chloride (NaCl crystalline) for *Ceriodaphnia dubia.*

3. Dilution Water Used: Moderately hard synthetic water.

4. Statistics: ToxCalc software Version 5.0 was used for statistical analyses.

Instructions: Clients should fill in all areas except those in the "Laboratory Use" block. Biomonitoring samples are preserved by storing them at 4°C and shipping them in ice. The hold time for each sample is 36 hours from the time of collection. Therefore, please collect and ship in such a way that the laboratory will receive the samples with ample time to initiate testing within that time frame. Samples shipped overnight on Friday via FedEx or UPS must be marked for Saturday delivery or they will not arrive until the following Monday.

Calculations and data reviewed: JH

To minimize pathogen spread:

Comments: - Test solutions were renewed from lowest concentration to highest, using separated pipettes & decanting vessels for each concentration. Pipettes were discarded daily. Test vessels with mortality in each concentration were renewed last, using different (new) pipettes for each test vessel.

Calculations and data reviewed: JH

Comments: * Pathogenic growth observed on minnows before death. Dead minnows were heavily fungused. Mortality did not appear to be due to a toxic effect, but due to a pathogenic interference.

Outfall 112:

Dunnett's MSD value: 0.2269

PMSD: 26.9

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Pimephales growth by 17.2% from the control (determined through reference toxicant testing).

Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for Pimephales growth in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

PMSD: 8.2

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Ceriodaphnia reproduction by 9.9% from the control.

Lower PMSD bound determined by USEPA (10^{th} percentile) = 11%.

Upper PMSD bound determined by USEPA (90^{th} percentile) = 37%.

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for *Ceriodaphnia* reproduction in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

Note:

7-d IC_{25} = 7-day 25% inhibition concentration. An estimation of the concentration of potassium chloride that would cause a 25% reduction in Pimephales growth for the test population.

CT = Central tendency (mean IC_{25}).

S = Standard deviation of the IC_{25} values.

$S_{A.10}$ = Standard deviation corresponding to the 10th percentile CV. $S_{A.10}$ = 0.12, as determined by USEPA for the method and endpoint.

$S_{A.25}$ = Standard deviation corresponding to the 25th percentile CV. $S_{A.25}$ = 0.21, as determined by the USEPA for the method and endpoint.

CV = Coefficient of variation of the IC25 values.

Control and warning limits were established using the standard deviation of the IC_{25} values corresponding to the 10th and 25th percentile CVs. These ranges are more stringent than the control and warning limits recommended by USEPA for the test method and endpoint.

USEPA Recommended Control and Warning Limits:

Warning Limit = Standard deviation corresponding to the 75th percentile CV. $S_{A.75}$ = 0.38.

Control Limit = Standard deviation corresponding to the 90th percentile CV. $S_{A.90}$ = 0.45.

Note:

CV = Coefficient of variation for control survival.
On average, the CV for control growth is **11.1%** in Environmental Testing Solutions, LLC Pimephales chronic toxicity tests.
Lower CV bound determined by USEPA (10^{th} percentile) = 3.5%.
Upper CV bound determined by USEPA (90^{th} percentile) = 20%

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference
PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Pimephales growth by **17.2%** from the control.
Lower PMSD bound determined by USEPA (10^{th} percentile) = 9.4%.
Upper PMSD bound determined by USEPA (90^{th} percentile) = 35%.

CT = Central Tendancy (mean Control Growth, CV, or mean PMSD)

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for Pimephales growth in chronic reference toxicant tests.

Dunnett's MSD value: 0.1672

PMSD: 18.7

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Pimephales growth by 17.2% from the control (determined through reference toxicant testing).

Lower PMSD bound determined by USEPA (10th percentile) = 9.4%.

Upper PMSD bound determined by USEPA (90th percentile) = 35%.

The lower and upper bounds were calculated by the USEPA using 205 tests conducted from 19 laboratories for Pimephales growth in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

Note:

7-d IC_{25} = 7-day 25% inhibition concentration. An estimation of the concentration of sodium chloride that would cause a 25% reduction in Ceriodaphnia reproduction for the test population.

CT = Central tendency (mean IC_{25}).

S = Standard deviation of the IC_{25} values.

$S_{A.10}$ = Standard deviation corresponding to the 10th percentile CV. $S_{A.10}$ = 0.08, as determined by USEPA for the method and endpoint.

$S_{A.25}$ = Standard deviation corresponding to the 25th percentile CV. $S_{A.25}$ = 0.17, as determined by the USEPA for the method and endpoint.

CV = Coefficient of variation of the IC_{25} values.

Control and warning limits were established using the standard deviation of the IC_{25} values corresponding to the 10th and 25th percentile CVs. These ranges are more stringent than the control and warning limits recommended by USEPA for the test method and endpoint.

USEPA Recommended Control and Warning Limits:

Warning Limit = Standard deviation corresponding to the 75th percentile CV. $S_{A.75}$ = 0.45.

Control Limit = Standard deviation corresponding to the 90th percentile CV. $S_{A.90}$ = 0.62.

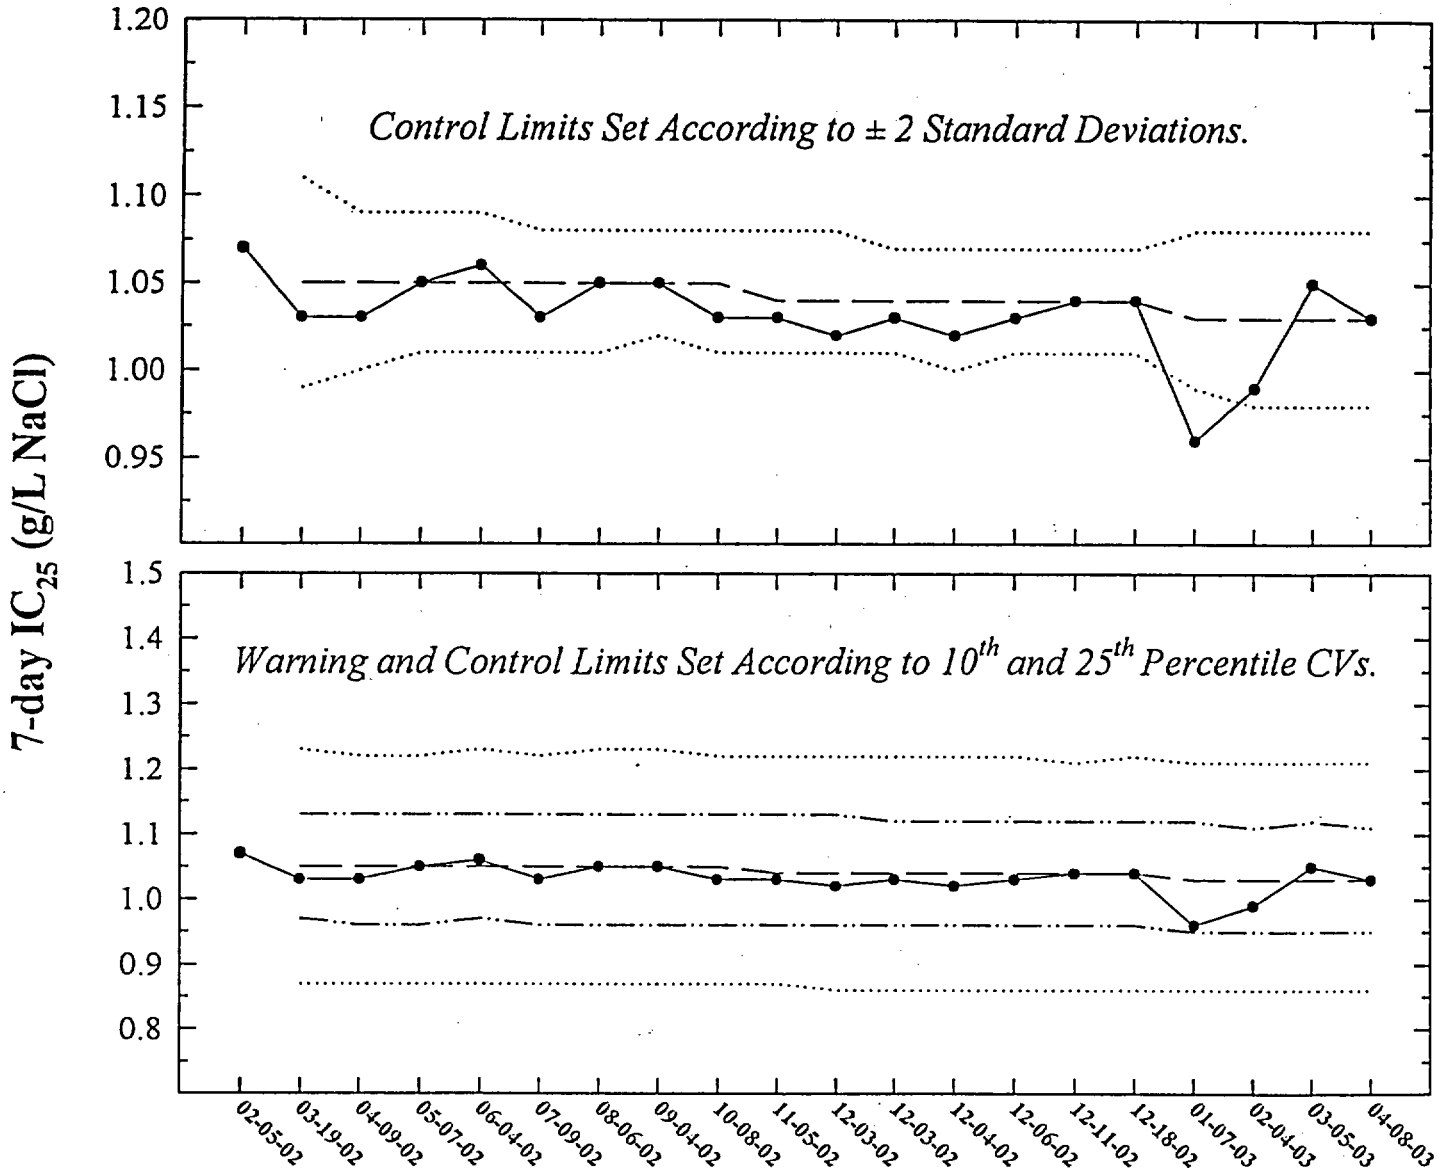
Sodium Chloride Chronic Reference Toxicant Control Chart for *Ceriodaphnia dubia* using Moderately Hard Synthetic Water



—•— 7-day IC_{25} = 25% inhibition concentration. An estimation of the concentration of sodium chloride that would cause a 25% reduction in *Ceriodaphnia* reproduction for the test population.

— – **Central Tendency** (mean IC_{25})

—·— **Warning Limits** (mean $IC_{25} \pm S_{A.10}$)

····· **Control Limits** (mean $IC_{25} \pm S_{A.25}$ or 2 Standard Deviations)

Note:

CV = Coefficient of variation for control reproduction.
On average, the CV for control reproduction is 8.4% in Environmental Testing Solutions, LLC *Ceriodaphnia* chronic
Lower CV bound determined by USEPA (10^{th} percentile) = 8.9%.
Upper CV bound determined by USEPA (90^{th} percentile) = 42%

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference
PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Ceriodaphnia reproduction by 9.9% from the control.
Lower PMSD bound determined by USEPA (10^{th} percentile) = 11%.
Upper PMSD bound determined by USEPA (90^{th} percentile) = 37%.

CT = Central Tendancy (Mean Control Reproduction, CV, or mean PMSD)

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for Ceriodaphnia reproduction in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

Dunnett's MSD value: 2.531

PMSD: 9.6

MSD = Minimum Significant Difference

PMSD = Percent Minimum Significant Difference

PMSD is a measure of test precision. The PMSD is the minimum percent difference between the control and treatment that can be declared statistically significant in a whole effluent toxicity test. On average, a significant difference occurs for Environmental Testing Solutions, LLC chronic toxicity tests when a toxicant reduces Ceriodaphnia reproduction by 9.9% from the control.

Lower PMSD bound determined by USEPA (10^{th} percentile) = 11%.

Upper PMSD bound determined by USEPA (90^{th} percentile) = 37%.

The lower and upper bounds were calculated by the USEPA using 393 tests conducted from 33 laboratories for *Ceriodaphnia* reproduction in chronic reference toxicant tests.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

TENNESSEE VALLEY AUTHORITY
TOXICITY TEST REPORT

INTRODUCTION/EXECUTIVE SUMMARY

1) Facility/Discharger: Watts Bar Nuclear Plant/TVA Report Date: May 13, 2003

2) County/State: Rhea/Tennessee 3) NPDES Permit #: TN0020168

4) Type of Facility: Nuclear-fueled electric generating plant

5) Average Flow (MGD): Flow will be determined at a later date.

6) Receiving Stream: TRM 527.9

7) 1Q20 (MGD): 2062

8) Outfall(s) Tested: 113 9) Dates Sampled: April 14-19, 2003

10) Flow on day(s) sampled (MGD): 183.02 182.25 182.91 182.16 182.98 184.04

Pertinent site conditions:

Watts Bar Hydro and WBN DSN 113 operations during this study are summarized in Appendix B. Dilution factors ranged from 59 to 60. There were no periods of zero release.

During the toxicity testing, the daily periodic bromine/chlorine treatment of WBN cooling water was in service.

12) Test Dates: April 15-22, 2003 13) Test Type: Short-term Chronic-definitive

14) Test Species: #1 Fathead Minnows (*Pimephales promelas*)
#2 Daphnids (*Ceriodaphnia dubia*)

15) Concentrations Tested (%): Outfall 113 2.58 5.20 10.3 20.6 41.2
Raw Water Intake 100

16) Permit Limit Endpoint (%): IC_{25} = 10.3%

17) Test Results (%): *Pimephales promelas*: IC_{25} >41.2%
Ceriodaphnia dubia : IC_{25} >41.2%

18) Facility Contact: Martha I. Ervin 19) Phone #: (423) 365-3585

20) Testing Lab Name: S&ME, Inc.

21) Lab Contact: Leira Douthat 22) Phone #: (865) 970-0003
TVA Contact: Cynthia L. Russell Phone #: (256) 386-2755

23) Notes: Exposure of test organisms to samples from Outfall 113 resulted in no toxicity to *Pimephales promelas* or *Ceriodaphnia dubia*. Fathead minnows exposed to intake samples were not significantly different from control for survival or growth based on Homoscedastic t-Test. There was no significant difference between control and intake samples for daphnid survival or reproduction based on Homoscedastic t-Test.

METHODS SUMMARY

Samples

1) Sampling Point: Outfall 113; Intake

2) Sample Type: Outfall 113- Composite; Intake-Grab

3) Sample Information:

ID	Date/Time Collected (MM-DD/Time)	Date/Time Received (MM-DD/Time)	Arrival Temp. (°C)	Initial TRC* (mg/L)	Date/Time Used By (MM-DD/Time)
113	04-14/1047 to 04-15/0947	04-15/1230	5.7	0.07	04-15/1345 04-16/1310
Intake	04-15/0750	04-15/1230	1.2	0.08	04-15/1345 04-16/1310
113	04-16/0825 to 04-17/0725	04-17/1050	1.9	0.09	04-17/1405 04-18/1430
Intake	04-17/0800	04-17/1050	3.2	0.06	04-17/1405 04-18/1430

Intake	04-19/1240	04-19/1455	5.7	0.04	04-20/1340 04-21/1250 04-22/1225

*Total residual chlorine measurements likely reflect interference with method.
NOTE: All times listed are Eastern Daylight Savings Time.

4) Sample manipulation: Samples were warmed to test temperature (25°C) in a warm water bath

Test Organisms

	Pimephales promelas	*Ceriodaphnia dubia*
1) Source:	In-house culture	In-house culture
2) Age:	< 24 hours	< 24 hours

Test Method Summary (See Appendix A for additional information)

	Pimephales promelas	*Ceriodaphnia dubia*
1) Test Conditions	Static, renewal	Static, renewal
2) Test Duration	7 days	Until at least 60% of control females have 3 broods
3) Dilution/Control Water	Moderately Hard Reconstituted Water	20% Dilute Mineral Water with trace minerals
4) Number Replicates	4	10
5) Animals per Replicate	10	1
6) Test Initiation (101)	4-15-03/1300 EDT	4-15-03/1345 EDT
7) Test Termination (101)	4-22-03/1300 EDT	4-21-03/1300 EDT
8) Test Temperature (101)	Mean = 25.4°C (24.2°C-26.0°C)	Mean = 25.2°C (24.3°C-25.9°C)

9) Physical/Chemical Measurements: Hardness, alkalinity, total residual chlorine, and conductivity were measured at the laboratory in each 100 percent sample or highest concentration tested. Daily temperatures were measured in one replicate in each test concentration. Pre- and post-exposure test solutions were analyzed daily for pH and dissolved oxygen.

10) Statistics: Statistics were performed according to methods prescribed by EPA using ToxCalc version 5.0 statistical software (Tidepool Scientific Software, McKinneyville, CA).

SUMMARY/CONCLUSIONS

Exposure of test organisms to samples from Outfall 113 resulted in no toxicity to *Pimephales promelas* or *Ceriodaphnia dubia*. Fathead minnows exposed to intake samples were not significantly different from control for survival or growth based on Homoscedastic t-Test. There was no significant difference between control and intake samples for daphnid survival or reproduction based on Homoscedastic t-Test.

Appendix A

ADDITIONAL TOXICITY TEST INFORMATION

SUMMARY OF METHODS

Fathead minnow tests were conducted according to EPA/821/R/02/013 using four replicates, each containing ten test organisms, per treatment. Test vessels consisted of 500-mL polystyrene tumblers, each containing 250 mL of test solution. [2]

C. dubia tests were conducted according to EPA/821/R/02/013 using ten replicates, each containing one test organism. Test vessels consisted of 30-mL polystyrene containers, each containing 15 mL of test solution.

DEVIATIONS/MODIFICATIONS TO TEST PROTOCOL

1) *Pimephales promelas*

None

2) *Ceriodaphnia dubia*

None

DEVIATIONS/MODIFICATIONS TO PRETEST CULTURE OR HOLDING OF TEST ORGANISMS

1) *Pimephales promelas*

None

2) *Ceriodaphnia dubia*

None

PHYSICAL AND CHEMICAL METHODS

1) Reagents, Titrants, Buffers, etc.: All chemicals were certified products used before expiration dates (where applicable).

2) Instruments: All identification, service, and calibration information pertaining to S&ME laboratory instruments is recorded in calibration and maintenance log books.

3) Temperature was measured using a VWR Scientific digital NIST-traceable thermometer according to S&ME SOP. [3]

4) Dissolved oxygen was measured using a VWR Scientific Dissolved oxygen meter. The instrument was calibrated and readings were made according to EPA Method 120.1.

5) The pH was measured using a VWR Scientific Symphony pH meter equipped with an Orion combination electrode. The instrument was calibrated and readings were made according to EPA Method 150.1.

6) Conductance was measured using an Orion conductivity meter. The instrument was calibrated and readings were taken according to manufacturers instructions.

7) Alkalinity was measured using Standard Methods Titration Method 2320 B using 0.01 N HCl to an endpoint pH of 4.5.

8) Hardness was measured using Standard Methods EDTA Titrimetric Method 2340 C or EPA Method 130.2.

9) Total residual chlorine was determined using the DPD Ferrous Titrimetric Method with a Hach Colorimetric kit.

QUALITY ASSURANCE

Toxicity Test Methods: All phases of the study including, but not limited to, sample collection, handling and storage; glassware preparation; test organism culturing/acquisition and acclimation; test organism handling during test; and maintaining appropriate test conditions were conducted according to the protocol as described in this report and EPA/821/R/02/013. [2] Any known deviations were noted during the study and are reported herein.

REFERENCE TOXICANT TESTS (See Appendix D for control chart information)

Test Type: 7-day chronic tests with results expressed as IC_{25} values in mg NaCl/L for *Ceriodaphnia dubia* or KCL/L for *Pimephales promelas*.

2) Standard Toxicant: Sodium Chloride (NaCl crystalline) and Potassium Chloride (KCl crystalline)

3) Dilution Water Used: 20% Dilute Mineral Water with trace metals for *Ceriodaphnia dubia* and Moderately Hard Water for *Pimephales promelas*.

4) Statistics: IC_{25} – calculated by ToxCalc version 5.0 statistical software using EPA-recommended methods.

Calvin Nichols ~~FedEx~~ MTE 4/15/03	4-15-03 @ 1230	Sarah Smith	4/15/03 1230

Instructions: *Clients* should fill in all areas except those in the "Laboratory Use" block. Biomonitoring samples are preserved by storing them at 4°C and shipping them in ice. The hold time for each sample is 36 hours from the time of collection. Therefore, please collect and ship in such a way that the laboratory will receive the samples with ample time to initiate testing within that time frame. Samples shipped overnight on Friday via FedEx or UPS must be marked for Saturday delivery or they will not arrive until the following Monday.

* Day 0 - 4/14/03 - PO - The room temperature of the lab was 26.1°C - opened all of the doors to cool the room down - Checked the temps of the control waters: #2 Mod. Hard = 25.8°C; #5 Mod. Hard = 25.6°C; Grab #3 = 25.8°C - After 15 minutes of the doors being open the temp decreased to 25.4°C - the control water temp was approximately the same temp after 15 minutes. - Left the doors ajar. - Temp remained @ 25.4°C

Note: 7-d IC_{25} = 7-day 25% inhibition concentration. An estimation of the concentration of sodium chloride that would cause a 25% reduction in Ceriodaphnia reproduction for the test population.

CT = Central tendency (mean IC_{25}).

S = Standard deviation of the IC_{25} values.

$S_{A.75}$ = Standard deviation corresponding to the 75th percentile CV. $S_{A.75}$ = 0.45, as determined by USEPA for the method and endpoint.

$S_{A.90}$ = Standard deviation corresponding to the 90th percentile CV. $S_{A.90}$ = 0.62, as determined by the USEPA for the method and endpoint.

CV = Coefficient of variation of the IC_{25} values.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

Note: 7-d IC_{25} = 7-day 25% inhibition concentration. An estimation of the concentration of sodium chloride that would cause a 25% reduction in Ceriodaphn reproduction for the test population.

CT = Central tendency (mean IC_{25}).

S = Standard deviation of the IC_{25} values.

$S_{A.75}$ = Standard deviation corresponding to the 75th percentile CV. $S_{A.75}$ = 0.45, as determined by USEPA for the method and endpoint.

$S_{A.90}$ = Standard deviation corresponding to the 90th percentile CV. $S_{A.90}$ = 0.62, as determined by the USEPA for the method and endpoint.

CV Coefficient of variation of the IC_{25} values.

USEPA. 2000. Understanding and Accounting for Method Variability in Whole Effluent Toxicity Applications Under the National Pollutant Discharge Elimination Program. EPA-833-R-00-003. US Environmental Protection Agency, Cincinnati, OH.

CERIODAPHNIA TEST INFORMATION SHEET

Test Name: Chronic Reference Test

Test Conducted From: 4/8/03 (Day 0) To 4/15/03 (Day 7)

Sites/Concentrations: 1. control 4. 1000mg/L
2. 500mg/L 5. 1500mg/L
3. 750mg/L 6. 8000mg/L

Stock (if applicable): _____
