Subject: After-thought Re: SECY ON INDUSTRY TRENDS

RT

RI has previously concurred and that concurrence still stands. here's my afterthought for your consideration:
I'm hearing that prelim CCDP #'s are hovering around 1E-3 for Davis-Besse RV head degradation. If this holds, it is the most significant event in many years.....should we mention the event as potentially relevant info rec'd after the end of ROP-2?

The attachment to this email contains a Commission paper that presents the results and development status of the Industry Trends Program for operating power reactors. The information contained in this Commission paper will be presented at the Agency Action Review Meeting (AARM) in April 2002.

This version of the Commission paper addresses all of the comments received from your staff on an earlier version of the paper we sent out for comment by email on February 26, 2002. In that email, we informed your staff that we would be requesting expedited concurrence to support timely issuance of the Commission paper prior to the AARM. Therefore, we request your concurrence by Friday, March 16, 2002.

Attached is the SECY on the Industry Trends Program as well as 5 files constituting the 4 attachments to the SECY as follows:

- Attachment 1: FY01 ASP Trends and AEOD Annual Trend Graphs (2 files)
- Attachment 2: Scram Causes and Activities
- Attachment 3: Initiating Events Long Term Plots
- Attachment 4: Action Matrix Trends

Thanks for your support!
Mike
