Mr. Lowell Starr, Chief  
National Mapping Division  
U.S. Geological Survey  
507 National Center  
Reston, Virginia 22092

Dear Mr. Starr:

The U.S. Nuclear Regulatory Commission, Division of High Level Waste Management staff is aware that the National Cartographic Information Center distributes digital cartographic/geographic data files produced by the U.S. Geological Survey as part of the National Mapping Program. The mission of the Division of High Level Waste Management is currently focused on evaluating the Department of Energy's site characterization activities at the proposed high level radioactive waste geologic repository at Yucca Mountain, Nevada. The digital map data files, Digital Line Graphs (DLG's) and Digital Elevation Models (DEM's), for the Busted Butte quadrangle and all surrounding quadrangles in the Yucca Mountain area are a powerful technical tool for my staff's site characterization evaluations. I understand that the Yucca Mountain, Nevada area digital map data files are not now available, but if they are given priority status for preparation, they would be available in December 1988. Therefore, due to their importance to the NRC mission, I respectfully request your cooperation in obtaining priority status for the development of the Yucca Mountain digital map data files.

Sincerely,

Robert E. Browning, Director  
Division of High-Level Waste Management  
Office of Nuclear Material Safety  
and Safeguards
