Docket No.: 50-244

June 2003

Patricia A. Kurkul, Regional Administrator National Marine Fisheries Service Northeast Regional Office (NERO) One Blackburn Drive Gloucester, MA 01930-2298

SUBJECT: APPLICATION FOR RENEWAL OF THE OPERATING LICENSE FOR THE R.E. GINNA NUCLEAR POWER PLANT

Dear Ms. Kurkul:

The U.S. Nuclear Regulatory Commission (NRC) is evaluating an application submitted by Rochester Gas and Electric Corporation for the renewal of the operating license for the R.E. Ginna Nuclear Power Plant (Ginna), located on the south shore of Lake Ontario in Wayne County, New York. The NRC is preparing a site-specific supplement to its "Generic Environmental Impact Statement for License Renewal of Nuclear Plants" (NUREG-1437) for threatened and endangered species. this proposed license renewal, for which we are required to evaluate potential impacts to

transmission lines, and would not result in new construction or disturbance. The Ginna plant and the associated transmission corridor, that is under review as part of the license renewal application, is located in Wayne County, New York. The transmission corridor is approximately 3 ½ miles long and is 500 feet in width. The plant uses once-through cooling water from Lake Ontario to remove waste heat from the facility. The proposed action would include use and continued maintenance of existing facilities and

the vicinity of the Ginna plant and its associated transmission lines. information on protected, proposed, and candidate species and critical habitat that may be in To support the environmental impact statement preparation process, and to ensure compliance with Section 7 of the Endangered Species Act, the NRC requests a list of species and

Attention: Mr. Robert Schaaff

ear Mr. Kuo

and Electric (RG&E), proposes to renew the operating license for this facility which will expire December 18, 2009. This project is located in the Town of Ontario, Wayne County, New York. The U.S. Fish and Wildlife Service (Service) has reviewed your letter dated November 27, 2002 regarding the relicensing of the R.E. Ginna Nuclear Power Plant. The applicant, Rochester Gas

fish and wildlife resources. However, the letter did not indicate when the comment period terminated for this scoping effort. Mr. Robert Schaff of your office stated comments should be submitted in early January 2003. The applicant and the Nuclear Regulatory Commission (NRC) will review comments and incorporate them into a Supplemental Environmental Impact Statement (SEIS). Your letter requested the Service's comments on aspects of the license renewal that may affect

no physical modifications are anticipated to the Ginna facility during the 20-year term of the next license. In addition, no operating changes are proposed at this time. The facility currently generates electricity for sale and distribution in Western New York State. It is our understanding from reviewing project documents located on the NRC internet site, that

provide additional comments pursuant to, and in accordance with, provisions of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.) in the future, purposes. Comments pursuant to the Endangered Species Act of 1973 (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.) were previously submitted in a letter dated February 25, 2002. We may particularly during the SEIS review period. This report of the Service and the Department of the Interior is submitted for project planning

Fish entrainment and impingement occurring from power plant water intake systems kill millions of fish every year in New York. The Environmental Report prepared for this project indicates that fish, fish eggs, and larvae entrainment and impingement have been evaluated by the

Rog2

collection of all fish life stages which are susceptible to entrainment and impingement. Details of the study should be coordinated with this office and the New York State Department of representative ichthyoplankton data from the water intake system. This study should focus on the may have occurred to the lake ecosystem during the 25 years since the study was completed completed in 1977 and is too old to accurately reflect current conditions. Considerable changes applicant and that the problem is not significant. However, the existing entrainment study was The applicant should conduct a multi-seasonal study which involves the collection of Environmental Conservation (NYSDEC). Additional information is required to reflect the current biological conditions of Lake Ontario.

to reduce fish injury and mortality such as the feasibility of installing a boom which will To mitigate the effects of impingement and entrainment, the applicant should evaluate measures evaluate this system for this facility and document this evaluation in the SEIS be the Best Technology Available, where its use is feasible. We recommend the applicant fully currently being used at three other major power plants in New York and has been determined to downstream of the boom with small bursts of air along the length of the filter. This system is from entering the water intake pipes. Fish larvae, eggs, and debris are removed and released structures. A filter boom, such as the Gunderboom System, can prevent fish larvae and eggs minimize fish impingement and entrainment of fish eggs and larvae in the cooling water intake

It is our understanding that erosion is progressing at both ends of the project shoreline. protection measures are not completely effective. The NYSDEC has indicated that a support of the project shoreline. the water and upland (Fuller, 1997). wildlife, and invertebrates. This technique uses vegetation to control erosion in a buffer between erosion controls are the most effective means to limit erosion and also provide habitat for fish biotechnical erosion controls be used for this project, if feasible. Rochester Gas and Electric should consider the use of measures other than hard structures (i.e. riprap) to control the erosion problem. Instead of hard structures, we recommend that biotechnical erosion controls be used for this project, if feasible. We believe that biotechnical needed to determine the extent of the problem and that remedial action may be necessary. more beneficial for wildlife and be more aesthetic than bare riprap viburnum (Viburnum dentatum), and other appropriate species. The use of vegetation will be cottetii), grey dogwood (Cornus racemosa), silky dogwood (Cornus amomum), arrowwood should include native plant species which will benefit wildlife such as dwarf willow (Salix block or riprap in combination with planting erosion controlling vegetation. If hard structures are necessary, we believe the applicant could use articulated concrete The buffer should extend from the water as far inland as The NYSDEC has indicated that a survey is This vegetation

your agency during the relicensing process and review of the SEIS We hope these comments are useful during your project review. The Service appreciates the opportunity to comment on this project during the scoping process. We will continue to work with

Sincerely,
