RANCHO SECO ISFSI EFFLUENT RELEASE REPORT

Attention: Randy Hall

In accordance with 10 CFR 72.44(d) and Technical Specification 5.5.2.d, we are reporting the quantity of radionuclides released to the environment in liquid and in gaseous effluents, due to the operation of the Rancho Seco Independent Spent Fuel Storage Installation (ISFSI), during 2002. The operation of the Rancho Seco ISFSI does not create any radioactive material or result in liquid or gaseous radioactive effluent releases. Therefore, there were no radionuclides released to the environment from liquid or gaseous effluents during the period of January 1, 2002 through December 31, 2002.

In the future, we will include the ISFSI effluent release information in the Annual Radioactive Effluent Release Report (ARERR) for our 10 CFR Part 50 licensed facility, which we have already submitted for last year.

Members of your staff requiring additional information or clarification may contact Bob Jones at (916) 732-4843.

Sincerely,

Steve Redeker
