FROM: David Tiktinsky High-Level Waste Technical Development Branch Division of Waste Management

SUBJECT: DEEP UNDERGROUND MINES

The enclosed table has been prepared in response to your request to locate and describe some domestic and foreign underground mines.

I have limited the selection of mines shown in the table only to those that are approximately the size of the proposed BWIP repository. Although other mines do exist, information of interest was not available.

Name of Mine	Shafts	Production	Employees Ug.	Hoisting System	Ventilation System	Type of Mine	Mining Methods Used
Homestake Mine Lead, South Dakota	4 Shafts 1950-5000 ft. deep	6233 TPD	969	Double drum friction hoist	900,000 cfm	Gold	Cut and Fill*
San Manuel, Magma Copper Co. Arizona	7 Shafts 2700-4100 ft. deep		1600	Double drum friction hoist	1.2 million ct	fm Copper	Block Caving**
Allan Potash Mines Allan, Saskatchewan Canada		11,000 TPD	135	Double drum	192,000 cfm	Potash	Cut and Fill ***

** Block Caving - A method of caving in which a thick block of ore is partly cut off from surrounding blocks by a series of drifts, one above the other, and then undercut by removing a slice of ore of a series of slices separated by small pillars underneath the block.

*** Room and Pillar - A mining method where the roof is supported by pillars left at regular intervals.

-9

A - Sublevel blasthole - A mining method that uses a blasting hole that takes a heavy charge of exposives.
B - Placer - A mining method that uses gravity separation to recover the metal ore.
C - Sublevel caving - A stoping method in which relatively thin blocks of ore are cøaused to cave by successively undermining small panels.
