This is a suggested draft letter. Please modify
as you see fit. David Stahl

An Appendix 7 interaction to discuss the Nevada Nuclear Waste Storage Investigations (NNWSI) Project activities on waste form characterization has been scheduled for _____ 1988. The purpose of this interaction will be to focus on the experimental work conducted on the spent fuel waste form, specifically, studies on fuel dissolution/leaching, fuel oxidation, and Zircaloy cladding degradation. The work on the high-level glass waste form will be the subject of a separate interaction at a later date.

In addition to presentations on the experimental efforts, a brief presentation will also be made on the initial efforts at geochemical modeling of spent fuel dissolution as it relates to spent fuel performance.

It is intended that the present interaction will take place at Battelle's Pacific Northwest Laboratories in Richland, WA, so that interested participants, if cleared in advance, can visit the hot cells and other facilities where the work is being performed.
