Letter S. Hucik, GE to S. Collins, NRC, Pre-application Review of ESBWR,

dated April 18, 2002

Subject:

Presentations to ACRS Thermal Hydraulic Subcommittee meeting on

ESBWR - July 8, 2003 Meeting

The enclosed electronic files are GE's presentations, which will be used in the scheduled meeting of July 8, 2003. The four presentations are entitled:

- 1. ESBWR TAPD, B. Shiralkar, July 8, 2003
- 2. ESBWR Testing Summary and Scale Effects, R. Gamble, July 8, 2003
- 3. TRACG Qualification for ESBWR, B. Shiralkar, July 8, 2003
- 4. TRACG Application, Y. Cheung, July 8, 2003

The purpose of this meeting is to provide an overview of the ESBWR design and the technology closure plan for the design. The presentations cover the overall roadmap for the technology program (including identification of key parameters, testing required and TRACG qualification plans). Additional details are provided on the supporting tests at different scales and the qualification of the TRACG code. The application of TRACG is covered in the last presentation.

D068

These four presentations contain proprietary information of the type which GE maintains in confidence and withholds from public disclosure. The information has been handled and classified as proprietary to GE as indicated in the Enclosure 1 affidavit. GE hereby requests that this information be withheld from public disclosure in accordance with the provisions of 10CFR 2.790 and 9.17. The few non-proprietary pages of these presentations will be provided to the NRC separately after the meeting.

If you have any questions about the information provided here, please contact Robert Gamble at (408) 925-3352, or me.

Sincerel

Atambir S. Rao

## **Enclosures**

(1) GE Proprietary Information Affidavit, dated July 2, 2003

JE Lyons USNRC (w/o enclosures)

AB Wang USNRC (w/o enclosures)

GB Stramback - GE (with enclosures)

## **General Electric Company**

## **AFFIDAVIT**

## I, George Stramback, state as follows:

- (1) I am Project Manager, Regulatory Services, General Electric Company ("GE") and have been delegated the function of reviewing the information described in paragraph (2) which is sought to be withheld, and have been authorized to apply for its withholding.
- (2) The information sought to be withheld is contained in the four presentations attached to GE letter MFN 03-043, A. S. Rao to NRC, Presentations to ACRS Thermal Hydraulic Subcommittee meeting on ESBWR July 8, 2003 Meeting, dated July 3, 2003. The proprietary information is on the pages marked with the legend "GE Proprietary Information" in the four presentations ESBWR TAPD, B. Shiralkar, July 8, 2003, ESBWR Testing Summary and Scale Effects, R. Gamble, July 8, 2003, TRACG Qualification for ESBWR, B. Shiralkar, July 8, 2003, and TRACG Application, Y. K. Cheung, July 8, 2003.
- (3) In making this application for withholding of proprietary information of which it is the owner, GE relies upon the exemption from disclosure set forth in the Freedom of Information Act ("FOIA"), 5 USC Sec. 552(b)(4), and the Trade Secrets Act, 18 USC Sec. 1905, and NRC regulations 10 CFR 9.17(a)(4), and 2.790(a)(4) for "trade secrets" (Exemption 4). The material for which exemption from disclosure is here sought also qualify under the narrower definition of "trade secret", within the meanings assigned to those terms for purposes of FOIA Exemption 4 in, respectively, Critical Mass Energy Project v. Nuclear Regulatory Commission, 975F2d871 (DC Cir. 1992), and Public Citizen Health Research Group v. FDA, 704F2d1280 (DC Cir. 1983).
- (4) Some examples of categories of information which fit into the definition of proprietary information are:
  - a. Information that discloses a process, method, or apparatus, including supporting data and analyses, where prevention of its use by General Electric's competitors without license from General Electric constitutes a competitive economic advantage over other companies;
  - b. Information which, if used by a competitor, would reduce his expenditure of resources or improve his competitive position in the design, manufacture, shipment, installation, assurance of quality, or licensing of a similar product;

- c. Information which reveals aspects of past, present, or future General Electric customer-funded development plans and programs, resulting in potential products to General Electric;
- d. Information which discloses patentable subject matter for which it may be desirable to obtain patent protection. GE is pursuing patent applications in the US Patent Office.

The information sought to be withheld is considered to be proprietary for the reasons set forth in paragraphs (4)a., (4)b., and (4)d., above.

- (5) To address 10 CFR 2.790 (b) (4), the information sought to be withheld is being submitted to NRC in confidence. The information is of a sort customarily held in confidence by GE, and is in fact so held. The information sought to be withheld has, to the best of my knowledge and belief, consistently been held in confidence by GE, no public disclosure has been made, and it is not available in public sources. All disclosures to third parties including any required transmittals to NRC, have been made, or must be made, pursuant to regulatory provisions or proprietary agreements which provide for maintenance of the information in confidence. Its initial designation as proprietary information, and the subsequent steps taken to prevent its unauthorized disclosure, are as set forth in paragraphs (6) and (7) following.
- (6) Initial approval of proprietary treatment of a document is made by the manager of the originating component, the person most likely to be acquainted with the value and sensitivity of the information in relation to industry knowledge. Access to such documents within GE is limited on a "need to know" basis.
- (7) The procedure for approval of external release of such a document typically requires review by the staff manager, project manager, principal scientist or other equivalent authority, by the manager of the cognizant marketing function (or his delegate), and by the Legal Operation, for technical content, competitive effect, and determination of the accuracy of the proprietary designation. Disclosures outside GE are limited to regulatory bodies, customers, and potential customers, and their agents, suppliers, and licensees, and others with a legitimate need for the information, and then only in accordance with appropriate regulatory provisions or proprietary agreements.
- (8) The information identified in paragraph (2), above, is classified as proprietary because it contains detailed test and analysis results and interpretations of testing performed in different facilities and their applicability to passive safety systems in BWR designs. The reporting, evaluation and interpretations of test results and analyses was achieved at a significant cost, on the order of several million dollars, to GE.

The development of the evaluation process along with the interpretation and application of the analytical results is derived from the extensive experience database that constitutes a major GE asset.

(9) Public disclosure of the information sought to be withheld is likely to cause substantial harm to GE's competitive position and foreclose or reduce the availability of profit-making opportunities. The information is part of GE's comprehensive BWR safety and technology base, and its commercial value extends beyond the original development cost. The value of the technology base goes beyond the extensive physical database and analytical methodology and includes development of the expertise to determine and apply the appropriate evaluation process. In addition, the technology base includes the value derived from providing analyses done with NRC-approved methods.

The research, development, engineering, analytical and NRC review costs comprise a substantial investment of time and money by GE.

The precise value of the expertise to devise an evaluation process and apply the correct analytical methodology is difficult to quantify, but it clearly is substantial.

GE's competitive advantage will be lost if its competitors are able to use the results of the GE experience to normalize or verify their own process or if they are able to claim an equivalent understanding by demonstrating that they can arrive at the same or similar conclusions.

The value of this information to GE would be lost if the information were disclosed to the public. Making such information available to competitors without their having been required to undertake a similar expenditure of resources would unfairly provide competitors with a windfall, and deprive GE of the opportunity to exercise its competitive advantage to seek an adequate return on its large investment in developing these very valuable analytical tools.

I declare under penalty of perjury that the foregoing affidavit and the matters stated therein are true and correct to the best of my knowledge, information, and belief.

General Electric Company
