MEMORANDUM FOR: Robert L. Johnson
Repository Projects Branch
Division of Waste Management

FROM: Timothy C. Johnson, Section Leader
Engineering Branch
Division of Waste Management

SUBJECT: REVIEW OF DOE EAs ON SALT SITES

The preliminary drafts of the EAs for the salt sites under consideration as HLW repository locations reference documents which are not yet available because they are only now being written by DOE. Claims are made in the EAs that we can not evaluate without these documents. One such claim is that both CHLW and SFPWR packages are intact at 10,000 years in the case of uniform corrosion rates and unlimited quantities of low Mg brine.

Although we recognize that NRC has no statutory responsibility for reviewing the EAs, in the interests of avoiding future delays in reviewing the EISs, copies of such documents should be obtained as soon as possible. We have thus far identified three documents and have verbally requested copies through R. L. Johnson. As we identify others, we will add them to the list.
