Printouts available in Dec / NM 55

John J. Linehan
Nuclear Regulatory Commission
7915 Eastern Avenue
Silver Springs, Md. 20910

Dear Mr. Linehan,

The enclosed materials include printouts which index the Environmental Assessment reference materials you have received. There are three types of printouts, and you may be receiving two or three, depending on the materials you have received and the geographic scope of your office.

The first type of printout is a shelf listing in library number (LIBNO) order of references from draft six of all salt site EA's. If you have received microfiche only, you will find one copy of this printout for each microfiche set you have been sent. If you also have hard copy references, there will be a copy of this printout for each of those sets.

The second type of printout is an alphabetical listing of references by author for sixth draft of all salt site EA's (NOTE: author can be a personal name or an organizational name). You will receive one copy of this printout for each microfiche set you have been sent.

The third type of printout is a state-specific author order index covering references from sites within the state only. The Louisiana printout covers Vacherie Dome Site EA; the Mississippi printout covers references from the Cypress Creek and Richton Dome EA's; The Texas printout covers Deaf Smith and Swisher County; and the Utah printout covers Davis and Lavender Canyon EA's. You will receive a state-specific listing for each set of hard copy references you have been sent. This printout should match your hard copy collections.

Please follow these guidelines in the use of these printouts:

- 1) These printouts supercede all previous printouts that may have been sent to you; these versions are the most complete, accurate, and currently available. -PLEASE DISCARD ALL PREVIOUS PRINTOUTS.

- 2) Please assure that your collection(s) are shelved or filed in LIBNO order.
- 3) When you receive a query regarding an EA reference, be sure the author is included in the citation given.
- 4) Look up the reference alphabetically in the author listing printout* (use the state-specific printout first, if you have it).
- 5) Find the item on the shelf or in file by LIBNO number, which is included in all records on the printouts.

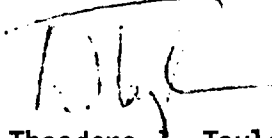

Please take note of the following points which explain some discrepancies you may discover between the printout listing and the collections of references you have:

- o The LIBNO order shelf listing has gaps because it covers only sixth draft references. Those LIBNO items which do not appear are items which were referenced in earlier drafts of the EA's.
- o You will find microfiche for items not on the printouts for a similar reason: the microfiche sets we have sent are as complete as possible, and include references collected from earlier drafts of the EA's.
- o The LIBNO listing should not be considered a shelf listing of your hard copy collection. All hard copy collections sent were site and state specific; the LIBNO printout covers all seven salt sites. You may wish to indicate on this printout which items you have on hand, by taking it to the shelf and checking those you have copies of.
- o You may receive queries for references you can't find on the printouts. Before deciding there is a problem, please verify the accuracy of the citation--if possible, locate the reference in the EA itself. The author printed in the original reference should be considered the authority.

* If there are many items listed by the same author or organization, you must scan all items; they are not arranged alphabetically by title within that same author.

We hope these guidelines answer your questions regarding the EA references and their indexing. If you still have problems or questions, please call Sarah Starr of the Salt Repository Project Office at (614) 424-5916.

Sincerely,

Theodore J. Taylor
