                    Division of High-Level Waste Management

SUBJECT: ASCII TAPE OF OIMS SOFTWARE AND ACCOMPANYING DATA BASE

The Center for Nuclear Regulatory Waste Analyses (CNWRA) is developing a
relational data base for managing NRC's high-level waste program. As part of
this activity, the CNWRA will be called upon to design a computerized tracking
system for tracking high-level waste issues, as in the manner of the Open Item
Management System (OIMS) now residing on NRC's IBM 9370 system. Please provide
me with an ASCII tape of the OIMS code and the accompanying data base at your
earliest convenience so that the CNWRA might proceed with this aspect of
relational data base development. Thank you.
