(Return to W&M, 623-SS)

Dr. John Schilling
 State Geologist
 Nevada Bureau of Mines and Geology
 Reno, NV 89557

Dear John:

You may recall that in February of this year a visit was made to your office by myself and a technical group from the Nuclear Regulatory Commission. This was part of a trip to review the investigations at the Nevada Test Site being done by the Department of Energy in connection with a possible repository for high-level radioactive waste.

Since that visit, substantial progress has been made by the Commission in formulating the regulations under which a repository would be licensed. I am writing to describe this activity.

The regulations will form part 60 of title 10 in the code of federal regulations (10 CFR 60). On February 25, 1981 subparts A, B, C and D of 10 CFR 60 were published in final form. These cover the licensing procedures. On July 8, 1981 subparts E, F, G and H were published as a proposed rule. These cover, among other things, the proposed geoscience criteria by which the suitability of a repository site would be determined.

Copies of both documents are enclosed, along with a technical rationale for subpart E.

I particularly wish to invite your attention to the proposed rule of July 8, which is open for written comments or suggestions by the public until November 5. You may find special interest in Subpart E-Technical Criteria. Here a number of geologic, hydrologic, geochemical and seismic requirements and conditions are presented.

It might also be noted that the Commission requests comments on certain topics in the proposed rule, as mentioned in the following portions of the text:
