EA/CONTRACTOR/MEETINGS

- 1 -

MEMORANDUM FOR: Philip S. Justus, Section Leader
Geology/Geophysics Section, WMGT
FROM: Richard R. Lee
Geology/Geophysics Section, WMGT
SUBJECT: EA REVIEW IN GEOLOGY/GEOPHYSICS

Meetings were conducted at NRC offices in Silver Spring from January 14 to January 18 between NRC Geology/Geophysics Section staff and their technical contractors. The objective of the meetings was to review draft comments of the final draft EAs and to use these comments in developing the NRC's detailed comments and to provide a basis for developing preliminary major comments.

The meetings were separated by site region consistent with the schedule presented in Enclosure 1. The agenda of each meeting was structured loosely such that all comments and concerns could be discussed. Due to time constraints an attempt was made to limit discussions to evaluating the supporting data referenced in the EAs, the technical analyses of those data and the conclusions reached from those analyses.

No formal meeting conclusions were reached, but the participants generally observed that the data is sufficiently limited in many cases to allow for some uncertainty in the EA conclusions, and that the segmented EA presentation makes the integration of different sections and chapters cumbersome to review.

The participants agreed that, given the tight time schedule to conduct their review, there was sufficient duplication of contractor comments and sufficiently different styles of addressing a particular issue that we felt comfortable that all the significant issues were addressed and discussed.

The enclosed draft comments (Enclosure 2) provide a record of the meetings and will be forwarded to the respective NRC project leaders. No further action is needed by those project leaders.
