This is in response to your April 2, 1985 memo in which you asked which codes listed my staff would like to have available.

The only category of codes that appear to have application to low-level waste problems are the Siting Codes. Of those listed, USGS3D, FEMWATER, and FEMWASTE have the most applicability to low-level waste problems. These three codes, however, are already implemented on the Brookhaven National Laboratory Central Computing Facility, and my staff sees no need in a transfer of them by CORSTAR.

If you have any questions regarding this matter, please contact Derek Widmayer at 74787.
