 Berkeley, California 94704

SUBJECT: RESPONSE TO MONTHLY PROGRESS REPORTS FOR APRIL, MAY, AND JUNE 1985
 (FIN B6985)

Dear Mr. Vogt:

We have reviewed your monthly reports for April and May 1985. With regard to the ADINA codes, it is our understanding that you have not yet resolved the problems encountered in running these codes. When we receive your estimates of the revised schedule and possible cost overruns due to the delay in getting the programs up at the Brookhaven facility they will be reviewed and you will be notified of the outcome.

You have identified two principal technical problems related to the VISCOT runs. First, there are the abnormally shaped stress contour lines in the plots of major and minor principal stresses for VISCOT, Problem 5.2 that appear in the May Technical Status Report. Please advise us when you have determined whether the use of additional interpolation points will resolve the problem with your contour plotting program. Second, there is the question raised in the June report of why use of the exponential-time creep law does not result in an increased creep effect. Please provide us more specifics about the creep laws you have considered.

The action taken by this letter is considered to be within the scope of the current contract NRC-02-81-026. No changes to cost or delivery of contracted products are authorized. Please notify me immediately if you believe this letter would result in changes to costs or delivery of contract products.

Sincerely,

Pauline P. Brooks
