Mr. Mark J. Logsdon, Project Manager
Nuclear Waste Consultants, Inc.
8341 South Sangre de Cristo Road
Suite 6
Littleton, Colorado 80127

Dear Mr. Logsdon:

Members of the NRC staff and NRC contractors are often incorrect in their use of terminology related to the disposal of high-level radioactive waste (HLW) in geologic repositories. In some instances, the use of common HLW terminology is actually inconsistent with the definitions set forth in NRC's HLW regulation, Title 10 of the Code of Federal Regulations (10 CFR 60). The lack of consistent usage of common terminology can introduce confusion and even error into research and licensing activities.

To alleviate this situation, I have enclosed a list of terms and their definitions commonly used in the field of deep geologic disposal of HLW. Where noted, these definitions are taken from 10 CFR 60.2. The other definitions are based on usage in various NRC staff documents. Please use these terms as defined in any correspondence with NRC's staff or other NRC HLW research or technical assistance contractors and in any of your HLW publications reporting on work supported by NRC.

The enclosed HLW glossary definitions should be substantively the same as HLW definitions used previously by the Division of Waste Management in other documents. If any significant differences are noted please contact me. These definitions may be modified occasionally. When such modifications occur, I shall notify you and send you a new list.
