**Subject:** Very rough estimate for password controlled SSD sheets

Per request of Jim for rough estimates of password controlled SSD sheets

A) Assign 1 password/userid (the same one) to anyone you wanted to give access to. This could be easily given to a lot of people.

about \$1,000

B) Like case A but in this case have a separate password and userid (generated by us and distributed by NRC) for each state. This would enable us to see what state was using the SSD sheets.

about \$1,300

C) Move the SSD sheets to the training server and get another internet card which would lock down that area. Would also need another copy of Cold Fusion (\$1300) and Windows 2000 (\$248). This would require time to install and test the internet card and software. Then separate passwords and userids would be assigned to a state (like case B).

card & software & time about \$9,600

Gloria
