Dear Mr. Wittman:

PDR  
LPDR(B)

As you requested during our telephone conversation on November 17, 1986, please find enclosed a copy of In Situ Inc.'s most recent quarterly report for July-September 1986 entitled "Flow of Groundwater and Transport of Contaminants through Saturated Fractured Geologic Media From High-Level Radioactive Waste." This report provides an overview of the research being conducted by In Situ Inc. for the NRC and summarizes their recent activities at the Creston, Washington site, which you are welcome to visit with us on December 1, 1986. We will meet at the Gateway Motel in Spokane, Washington at 8:00 am on December 1. After a short discussion about the site, we will drive to Creston and visit the site until lunchtime. After the site visit, the NRC staff and contractors will drive south to Richland and observe outcrops of the Columbia River Basalts along the Columbia River. We anticipate arriving in Richland by approximately 6:00 pm on the evening of December 1.

I will not be able to forward to you information about the visit to the Bunker Hill Mine in time for your review before December 1. As we discussed, part of the NRC review team will visit Bunker Hill on December 1 rather than visiting Creston. Please contact me if you need additional information or would like to discuss further the visits to the Creston site or Bunker Hill Mine.

Sincerely,

15/

Michael F. Weber  
Geotechnical Branch  
Division of Waste Management
