SUBJECT: LOUISIANA ENERGY SERVICES PROJECT WATER REQUIREMENTS

Dear Mr. Barr:

I'm responding to your email of September 3, 2003, to the U.S. Department of Energy in which you expressed concern about the quantity of water projected to be needed for the proposed Louisiana Energy Services (LES) gas centrifuge uranium enrichment plant in Eunice, New Mexico. It is our understanding the LES project will require about 75 acre-feet of water for plant operations. Local officials have told us that this amount is about one-third of the annual water usage at the Eunice golf course and is equivalent to that needed by a 25-acre farm. Local officials have told us that this requirement is not a significant impact on current community water needs. Nevertheless, U.S. Nuclear Regulatory Commission staff will consider water usage requirements in the Environmental Impact Statement it is required to prepare for the project.

If you have any questions, please contact me at 301-415-7299.

Sincerely,

/RA/

Timothy C. Johnson
