Rules and Directives

Chairman Richard Meserve
United States Nuclear Regulatory Commission
Washington, D.C. 2055

Dear Chairman Meserve:

The proposed plutonium bomb fuel factory puts our nation, and especially this region at great risk. From the transport of plutonium across the country to the need to safely secure it upon arrival, we are also burdened with an unacceptable scheme that will increase contamination at the already extremely polluted Savannah River Nuclear Site. This proposal, also known as "MOX," is not safe, affordable, or sustainable. We again urge the Nuclear Regulatory Commission to deny the license request.

Sincerely,
