Subject: Briefing for Chairman

Jack and Brian,

The Chairman's office has asked for two briefings that will require some integration between various offices. I believe they would like to have something next week, if it is supportable, as the Chairman will be on travel the week after.

1. NRC's Management of Materials Degradation - the focus of this topic would be, at a high level, the agency's strategy to address current as well as future potential material degradations (ala Alloy 600, IGSCC, material passivation) - Clearly both RES and NRR have activities in this area, including the DB LLTF Action Plans. I think a high level giving him a sense of our present and future strategies in this area would suffice - can provide IOUs for more detailed discussions in the future, if needed.

2. Emergency Planning - FEMA interactions and IP Specific

This would be a discussion of how we interact with FEMA, both at the HQ and Regional level, challenges that exist in this relationship and where we work well together, and a specific discussion on the "what ifs" at Indian Point depending on what direction FEMA takes in its ongoing efforts to work with the state and local governments of certifying the e-plans.
