 Nuclear Regulatory Commission
 Washington, DC 20555-0001

RE: ACTIONS TO ACHIEVE POST-FIRE SAFE SHUTDOWN

With the near catastrophic fire at Browns Ferry nuclear power station in 1975, NRC is mandated by federal law to require electrical systems used for the automated shutdown of the reactor from the control room be maintained free from fire damage in the event of a serious fire. The NRC proposed relaxation of enforcement of current fire code would allow non-compliant reactor operators to sacrifice automated reactor shutdown electrical systems and instead substitute non-validated manual actions that increase unacceptable and undue risks to public health and safety and the environment in the event of fire.

The recent 6.5 earthquake near Cambria alerts us to the 7.3 quake in Nov. 1927 on Hosgri Fault which is right next to Diablo Nuclear Power Plant. Diablo has become a very dangerous nuclear waste storage site. Do not weaken rules protecting the plant.

Sincerely,

William Denneen, Biologist, 1040 Cielo Lane, Nipomo, CA., 93444 929-3647
