Subject: Nuclear power station safety

To Whom It May Concern:
As a result of the fire at Brown's Ferry nuclear power station in 1975 which was a near catastrophe, NRC is mandated by federal law to require electrical systems used for automated shutdown of the reactor from the control room be maintained free from fire damage in the event of a serious fire. I oppose the proposed relaxation of enforcement of the current fire code that would allow non-compliant reactor operators to sacrifice automated reactor shutdown electrical systems and instead substitute non-validated manual actions that increase unacceptable and undue risks to public health and safety and the environment in the event of a reactor fire.
