the initial fission neutron source distribution was read from the srctp file named srctp
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119522 neutron histories and 100 active cycles with 400152 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 519674 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .93949 with an estimated standard deviation of .00097

the estimated 68, 95, & 99 percent keff confidence intervals are .93852 to .94046, .93756 to .94142, and .93693 to .94205

the estimated collision/absorption neutron removal lifetime = 9.46E-05 seconds with an estimated standard deviation of 2.00E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.93888	.00149	.93739 to .94037	.93591 to .94184	.93495 to .94281	
absorption	.94002	.00117	.93884 to .94119	.93768 to .94235	.93692 to .94311	
track length	.93915	.00153	.93762 to .94068	.93610 to .94220	.93511 to .94319	
col/absorp	.93959	.00096	.93863 to .94055	.93768 to .94150	.93706 to .94213	.0735
abs/trk len	.93970	.00097	.93873 to .94068	.93777 to .94164	.93714 to .94227	.0761

the initial fission neutron source distribution was read from the srctp file named srctp
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119861 neutron histories and 100 active cycles with 400844 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520705 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .94166 with an estimated standard deviation of .00081

the estimated 68, 95, & 99 percent keff confidence intervals are .94084 to .94247, .94003 to .94328, and .93950 to .94381

the estimated collision/absorption neutron removal lifetime = 8.94E-05 seconds with an estimated standard deviation of 1.90E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.94222	.00130	.94092 to .94352	.93963 to .94481	.93878 to .94566	
absorption	.94125	.00109	.94016 to .94234	.93909 to .94342	.93838 to .94412

1keff results for: Far-Field Consequence Study - 32% H20/ 8% UO2 (ep40g1) 10000 Years 600K probid = 08/29/96 12:31:20

the initial fission neutron source distribution was read from the srctp file named srctp .
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119705 neutron histories and 100 active cycles with 400731 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520436 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .94531 with an estimated standard deviation of .00095

the estimated 68, 95, & 99 percent keff confidence intervals are .94436 to .94626, .94341 to .94721, and .94279 to .94783

the estimated collision/absorption neutron removal lifetime = 8.69E-05 seconds with an estimated standard deviation of 1.77E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.94621	.00133	.94488 to .94755	.94356 to .94887	.94270 to .94973	
absorption	.94452	.00112	.94340 to .94565	.94228 to .94676	.94155 to .94749

1keff results for: Far-Field Consequence Study - 32% H20/ 8% U02 (sp40e1n) 1000 Years 600K probid = 08/29/96 20:06:21

the initial fission neutron source distribution was read from the sretp file named sretp
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119728 neutron histories and 100 active cycles with 400772 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520500 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .93731 with an estimated standard deviation of .00088

the estimated 68, 95, & 99 percent keff confidence intervals are .93642 to .93819, .93555 to .93907, and .93497 to .93964

the estimated collision/absorption neutron removal lifetime = 9.56E-05 seconds with an estimated standard deviation of 1.78E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.93689	.00133	.93556 to .93822	.93424 to .93954	.93338 to .94040	
absorption	.93762	.00120	.93643 to .93882	.93524 to .94001	.93446 to .94079	
track length	.93681	.00136	.93545 to .93818	.93410 to .93953	.93321 to .94042	
col/absorp	.93729	.00088	.93641 to .93817	.93554 to .93905	.93497 to .93962	-.0346

```

the initial fission neutron source distribution was read from the srctp file named srctp
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 120117 neutron histories and 100 active cycles with 400133 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520250 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

---

the final estimated combined collision/absorption/track-length keff = .93482 with an estimated standard deviation of .00081

the estimated 68, 95, & 99 percent keff confidence intervals are .93401 to .93563, .93320 to .93643, and .93267 to .93696

the estimated collision/absorption neutron removal lifetime = 9.40E-05 seconds with an estimated standard deviation of 1.90E-07

---

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.93517	.00121	.93396 to .93638	.93276 to .93758	.93198 to .93836

1keff results for: Far-Field Consequence Study - 32% H20/ 8% UO2 (sp40g1n) 10000 Years 600K prebid = 08/29/96 16:44:37

the initial fission neutron source distribution was read from the srctp file named srctp .
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 120052 neutron histories and 100 active cycles with 401833 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 521885 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

---

the final estimated combined collision/absorption/track-length keff = .93357 with an estimated standard deviation of .00080

the estimated 68, 95, & 99 percent keff confidence intervals are .93277 to .93437, .93197 to .93517, and .93145 to .93569

the estimated collision/absorption neutron removal lifetime = 9.33E-05 seconds with an estimated standard deviation of 2.08E-07

---

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.93359	.00119	.93240 to .93477	.93122 to .93595	.93045 to .93672	
absorption	.93356	.00108	.93248 to .93465	.93141 to .93572	.93070 to .93642	
track length	.93358	.00118	.93240 to .93477	.93122 to .93594	.93045 to .93671

1keff results for: Far-Field Consequence Study - 32% H20/ 8% UO2 (sp40e1z) 1000 Years 600K probid = 08/29/96 23:27:14

the initial fission neutron source distribution was read from the srctp file named srctp
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119671 neutron histories and 100 active cycles with 400980 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520651 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the u test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(f collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .93493 with an estimated standard deviation of .00078

the estimated 68, 95, & 99 percent keff confidence intervals are .93415 to .93572, .93337 to .93650, and .93286 to .93701

the estimated collision/absorption neutron removal lifetime = 9.56E-05 seconds with an estimated standard deviation of 2.07E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.93561	.00113	.93427 to .93656	.93315 to .93766	.93242 to .93839	
absorption	.93444	.00116	.93326 to .93562	.93209 to .93679	.93133 to .93755

1keff results for: Far-Field Consequence Study - 32% H20/ 8% UO2 (sp40g1y) 10000 Years 600K probid = 08/29/96 19:39:01

the initial fission neutron source distribution was read from the srctp file named srctp .
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119593 neutron histories and 100 active cycles with 400688 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520281 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 99 percent confidence level, but not at 95 percent
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .95562 with an estimated standard deviation of .00095

the estimated 68, 95, & 99 percent keff confidence intervals are .95467 to .95657, .95373 to .95751, and .95311 to .95813
the estimated collision/absorption neutron removal lifetime = 8.39E-05 seconds with an estimated standard deviation of 1.92E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.95629	.00141	.95488 to .95770	.95348 to .95910	.95257 to .96001	
absorption	.95516	.00113	.95403 to .95630	.95290 to .95742	.95217 to .95816	
track length	.95613	.00147	.95466 to .95761	.95321 to .95906	.95225 to .96002	
col/absorp	.95559	.00094	.95464 to .95653	.95371 to .95747	.95310 to .95808	.1287
abs/trk len	.95551	.00095	.95456 to .95646	.95361 to .95741	.95299 to .95803	.1162
col/trk len	.95641	.00140	.95501 to .95782	.95362 to .95921	.95270 to .96012	.9841
col/abs/trk len	.95562	.00095	.95467 to .95657	.95373 to .95751	.95311 to .95813

1keff results for: Far-Field Consequence Study - 32% H20/ 8% UO2 (sp40g1z) 10000 Years 600K probid = 08/29/96 15:14:43

the initial fission neutron source distribution was read from the srctp file named srctp .

the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 120373 neutron histories and 100 active cycles with 400336 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520709 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 99 percent confidence level, but not at 95 percent
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
warning. the k(trk length) cycle values do not appear normally distributed at the 99 percent confidence level

---

the final estimated combined collision/absorption/track-length keff = .90902 with an estimated standard deviation of .00090

the estimated 68, 95, & 99 percent keff confidence intervals are .90813 to .90992, .90724 to .91081, and .90665 to .91140

the estimated collision/absorption neutron removal lifetime = 9.04E-05 seconds with an estimated standard deviation of 2.10E-07

---

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.90969	.00123	.90846 to .91092	.90726 to .91214	.90643 to .91293	
absorption	.90829	.00115	.90714 to .90944	.90600 to .91058	.90526 to .91132

1keff results for: Far-field Consequence Study - 32% #20/ 8% UO2 (sp40g1x) 10000 Years 600K prebid = 08/29/96 13:42:02

the initial fission neutron source distribution was read from the srctp file named srctp .
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119677 neutron histories and 100 active cycles with 400328 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 520005 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .94482 with an estimated standard deviation of .00089

the estimated 68, 95, & 99 percent keff confidence intervals are .94393 to .94571, .94305 to .94659, and .94247 to .94717

the estimated collision/absorption neutron removal lifetime = 8.46E-05 seconds with an estimated standard deviation of 1.79E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.94541	.00142	.94399 to .94683	.94259 to .94824	.94166 to .94916	
absorption	.94460	.00111	.94349 to .94571	.94239 to .94682	.94167 to .94754	
track length	.94528	.00138	.94390 to .94666	.94254 to .94802	.94164 to .94892	
col/absorp	.94490	.00091	.94400 to .94581	.94310 to .94671	.94251 to .94730	.0616
abs/trk len	.94487	.00089	.94398 to .94576	.94309 to .94666	.94252 to .94721	.0455
col/trk len	.94524	.00138	.94385 to .94662	.94248 to .94799	.94158 to .94889	.9818
col/abs/trk len	.94482	.00089	.94393 to .94571	.94305 to .94659	.94247 to .94717

1keff results for: For-Field Consequence Study - 32% H20/ 8% UO2 (sp401) 100000 Year Cycle  350K        probid =  08/29/96 13:28:41

 the initial fission neutron source distribution was read from the srctp file named srctp
```

the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 120132 neutron histories and 100 active cycles with 399689 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 519841 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the u test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

---

the final estimated combined collision/absorption/track-length keff = .99942 with an estimated standard deviation of .00093

the estimated 68, 95, & 99 percent keff confidence intervals are .99849 to 1.00035, .99756 to 1.00127, and .99696 to 1.00188

the estimated collision/absorption neutron removal lifetime = 6.32E-05 seconds with an estimated standard deviation of 1.99E-07

---

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr

```

the initial fission neutron source distribution was read from the sretp file named sretp .
the criticality problem was scheduled to skip 30 cycles and run a total of 130 cycles with nominally 4000 neutrons per cycle.
this problem has run 30 inactive cycles with 119683 neutron histories and 100 active cycles with 399832 neutron histories.

this calculation has completed the requested number of keff cycles using a total of 519515 fission neutron source histories.
all cells with fissionable material were sampled and had fission neutron source points.

the results of the w test for normality applied to the individual collision, absorption, and track-length keff cycle values are:

the k(collision) cycle values appear normally distributed at the 95 percent confidence level
the k(absorption) cycle values appear normally distributed at the 95 percent confidence level
the k(trk length) cycle values appear normally distributed at the 95 percent confidence level

the final estimated combined collision/absorption/track-length keff = .94767 with an estimated standard deviation of .00087

the estimated 68, 95, & 99 percent keff confidence intervals are .94680 to .94853, .94594 to .94939, and .94537 to .94996

the estimated collision/absorption neutron removal lifetime = 9.36E-05 seconds with an estimated standard deviation of 1.93E-07

the estimated average keffs, one standard deviations, and 68, 95, and 99 percent confidence intervals are:

keff estimator	keff	standard deviation	68% confidence	95% confidence	99% confidence	corr
collision	.94652	.00131	.94520 to .94783	.94391 to .94912	.94306 to .94998	
absorption	.94858	.00119	.94739 to .94977	.94622 to .95094	.94545 to .95171
