

**~~SAFEGUARDS INFORMATION - MODIFIED HANDLING~~**

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
OFFICE OF NUCLEAR MATERIALS SAFETY AND SAFEGUARDS  
WASHINGTON, D.C. 20555-0001

January 12, 2004

**NRC REGULATORY ISSUE SUMMARY 2002-12M  
MANUFACTURING AND DISTRIBUTION LICENSEES  
NRC THREAT ADVISORY AND PROTECTIVE MEASURES SYSTEM (U)**

**ADDRESSEES**

LICENSEES AUTHORIZED TO MANUFACTURE OR INITIALLY TRANSFER ITEMS  
CONTAINING RADIOACTIVE MATERIAL FOR SALE OR DISTRIBUTION AND POSSESS  
CERTAIN HIGH-RISK RADIOACTIVE MATERIAL OF CONCERN

**INTENT**

The U.S. Nuclear Regulatory Commission (NRC or Commission) is issuing this Regulatory Issue Summary (RIS) to inform addressees of changes to the descriptions of the various threat advisory conditions and provide guidance that addressees may use in preplanning graded protective measures to respond to changes in the threat environment. It is noted that a RIS is generally used to communicate with the nuclear industry on a variety of matters for which no response or action is required. This RIS communicates actions the NRC considers appropriate at each threat level. In the interest of expediency, the Commission has determined that issuance of this RIS is the most efficient mechanism to align the Department of Homeland Security, NRC, and licensee expectations with respect to licensees' response to threat advisories.

**BACKGROUND**

The Office of Homeland Security (OHS) developed a Homeland Security Advisory System (HSAS) to provide a comprehensive and effective system to disseminate information regarding the risk of terrorist attacks to Federal, State, and local authorities and the public. The HSAS implements Homeland Security Presidential Directive 3, March 11, 2002, as amended by Homeland Security Presidential Directive 5, February 28, 2003 (Attachment 1). This new system includes five color-coded threat conditions with a description of corresponding actions at each level. These conditions are:

**Warning:** Violation of Section 147 of the Atomic Energy Act of 1954, "Safeguards Information" is subject to Civil or Criminal penalties.

Document transmitted herewith contains Safeguards Information. When separated from Attachment 2, this document is Decontrolled.

**SAFEGUARDS INFORMATION - MODIFIED HANDLING**

- |   |                             |                                      |
|---|-----------------------------|--------------------------------------|
| ● | Green (Low Condition)       | Low risk of terrorist attack         |
| ● | Blue (Guarded Condition)    | General risk of terrorist attack     |
| ● | Yellow (Elevated Condition) | Significant risk of terrorist attack |
| ● | Orange (High Condition)     | High risk of terrorist attack        |
| ● | Red (Severe Condition)      | Severe risk of terrorist attack      |

## DISCUSSION

The HSAS provides a consistent national framework for allowing government officials and citizens to communicate the nature and degree of terrorist threats. The advisory system characterizes appropriate levels of vigilance, preparedness, and readiness for each threat condition and describes associated actions that should be taken to counter and respond to terrorist activities.

In declaring threat conditions, the Secretary of Homeland Security in consultation with the Attorney General, members of the Homeland Security Council, and any other appropriate federal agency heads, will consider, but not be limited to, the following factors:

- To what degree is the threat information credible?
- To what degree is the threat information corroborated?
- To what degree is the threat specific and/or imminent?
- How grave are the potential consequences of the threat?
- To what degree is the target vulnerable to the threat?

HSAS advisories regarding threat conditions may be declared for the entire nation or for a specific geographical area, or functional or industrial sector, and will be sent to local, State, and Federal government agencies as appropriate. In general, the threat conditions escalate as the likelihood or imminence of an attack increases.

Although the threat condition will be determined by the Secretary of Homeland Security, the NRC has the obligation under Presidential Homeland Security Directive 3 to establish the appropriate protective measures for facilities under its regulatory authority. In addition, the NRC has the obligation to respond to risks, threats, incidents, and events at NRC-regulated facilities, or involving NRC-regulated materials, including radioactive material possessed by organizations licensed by Agreement States when necessary to promote the common defense and security.

Upon a declaration of an HSAS threat condition, the NRC will promptly notify affected NRC and Agreement State licensees and the affected Agreement States of the threat condition and of the appropriate protective measures. In addition, the NRC may find it appropriate to notify affected licensees to establish certain protective measures in the absence of an HSAS declaration. The NRC could take such a step, for example, to respond to an emergency or a site-specific situation.

The NRC is using this RIS to announce its threat advisory and protective measures system to implement the HSAS for manufacturing and distribution licensees. The NRC will relay information relating to the threat conditions using the color-coded system defined by the HSAS. The NRC has also defined protective measures in five levels, which generally correlate with the five color-coded conditions of the HSAS. Protective measures at each level build upon the actions defined in the lower levels. For example, measures at level III will include those measures taken at levels I and II.

- The level I (Low) protective measures, which generally correspond to the green threat condition, are considered to be the routine level of operation and are satisfied by licensees maintaining the security programs required by the regulations, individual licenses, and Orders. Measures to enhance security need to be available so that they can be readied or implemented in higher threat conditions when called upon.
- The level II (Guarded) protective measures, which generally correspond to the blue threat condition, warrant more action by the licensees, but will generally not involve significant action beyond the routine level of operation. These actions would typically relate to readiness, e.g., notifying personnel to standby, or bringing in additional security officers to prepare for an enhanced response. Actions taken at level II will include those taken at level I.
- The level III (Elevated) protective measures, which generally correspond to the yellow threat condition, warrant enhanced security measures and additional resources, perhaps on a sustained basis, but would be based on hardware and personnel already at the licensee's disposal. (Note: When the HSAS was first announced on March 12, 2002, OHS also announced that the country was then considered to be in a Yellow threat condition.) Actions taken at level III will include those taken at levels I and II.
- The level IV (High) protective measures, which generally correspond to the orange threat condition, assume that the licensee's security organization is at its highest sustainable level and that the licensee will request augmentation by local and State, and possibly Federal, resources to provide additional defensive capabilities to the extent such resources can be made available. (Note: NRC advisories will provide additional specific information to the licensee(s) as information about the threat develops. Any additional licensee actions will be based upon threat specific information). Actions taken at level IV will include those taken at levels I, II, and III.
- The level V (Severe) protective measures, which generally correspond to the red threat condition, assume that the licensee will request augmentation by Federal resources beyond State and local resources to provide additional defensive capabilities to the extent such resources can be made available to enhance the security of the facility. NRC will facilitate implementation of this added Federal presence. (Note: It is expected that this condition will be limited to one or a very small number of licensees for a limited period of time. Any additional specific actions will be based on an ongoing assessment of the threat by the NRC and other Federal agencies.) Actions taken at level V will include those taken at levels I, II, III, and IV.

When a change in threat condition that affects NRC and Agreement States' licensees, the NRC will issue a threat advisory notifying its licensees and Agreement States of the change. The NRC will refer licensees to the recommended protective measures outlined in the table attached to this RIS. Regardless of the current threat condition, licensees are required to comply with existing regulations, licenses, and Orders. The table is designed to provide a clear description of the basic actions appropriate to achieve the desired level of protection. The NRC may tailor the protective measures to be implemented based on the nature of the threat, including specific instructions regarding protection against a specific mode of attack.

In some cases, the circumstances of a particular threat may warrant that additional security measures be implemented beyond those provided in the attached table. For example, such additional measures may be necessary depending upon the type of licensee affected, the security risks associated with various licensed activities, the specific vulnerabilities at a given site, the suspected mode of attack, and the likelihood and nature of the threat. Although most terrorist attacks occur without specific warning, whenever possible, the NRC will provide information about the nature and projected time frame of the threat.

The protective measures in the attached table are assigned to particular threat levels, reflecting the seriousness of the threat and the need for timely action to address the threat. Therefore, prompt implementation of the measures is essential if the steps are to be effective in protecting the facility.

The Commission may need to direct additional measures to deal with a fast-moving situation in the transition period before a formal declaration of a threat escalation. HSPD-3 states that agency heads "retain the authority to respond, as necessary, to risks, threats, incidents, or events at facilities within the specific jurisdiction of their department or agency." In these cases, the NRC threat advisory will include additional specific guidance beyond what is generically prescribed in the tables for a particular threat level.

NRC will update the table enclosed with this RIS (Attachment 2) as necessary to reflect changes in protective measures for various threat levels and to reflect results from its ongoing comprehensive review of security matters. In addition, this RIS will be reviewed at least once a year and revised as necessary consistent with requirements to report changes to the Department of Homeland Security by August 1 of each year. Licensees seeking to provide input to the RIS and possible revisions should forward comments to the contacts listed below.

#### **FEDERAL REGISTER NOTIFICATION**

A notice of opportunity for public comment was not published in the *Federal Register* because this RIS is informational. The Commission also plans to issue additional Regulatory Issue Summaries in this series to cover additional classes of licensees, or NRC-licensed activities, as NRC's review progresses. Any specific comments should be forwarded to the contacts listed below.

## PAPERWORK REDUCTION ACT STATEMENT

This RIS does not request any information collection; therefore, this RIS is not subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, et seq.)

If you have any questions about this matter, please telephone or e-mail the technical contacts listed below.
