Subject: No early site permit for clinton

11

I'm writing to express my concern about the proposed early site permit for exelon's clinton nuclear facility. I strongly oppose this idea and want to urge the NRC to refuse the early site permit request.

Nuclear energy is not safe for our environment or to our public health. It creates waste that we currently do not know how to dispose of. Yucca mountain is definitely not a safe option, the science tells us that, and the transportation to such a location would endanger all the American people that live near the transportation routes. Not to mention the devastating effects that an accident could have on our food supply - as most of the routes to yucca through the great plains are surrounded by farms. Even besides all this, if yucca was approved, all the space in it is accounted for already. There would be no room for more waste from Clinton IL that's for sure. We need to start using safe energy alternatives such as wind and solar power not dangerous nuclear power.

Thank you,
Ryan Doyle
