RE: PUBLIC COMMENT ON DRAFT CRITERIA ON MANUAL ACTIONS TO ACHIEVE POST-FIRE SAFE SHUTDOWN

To Whom It May Concern:

I grew up in Chattanooga and my family still lives there, surrounded by Browns Ferry, Sequoyah & Watts Bar. As a result of the near catastrophic fire at Browns Ferry nuclear power station in 1975, NRC is mandated by federal law to require electrical systems used for the automated shutdown of the reactor from the control room be maintained free from fire damage in the event of a serious fire. Please do not relax enforcement of the current fire code to allow non-compliant reactor operators to sacrifice automated reactor shutdown electrical systems and substitute non-validated manual actions. This would increase unacceptable and undue risks to public health and safety and the environment in the event of fire. thank you. Mary Mastin, 360 Roberts Hollow LN, Cookeville, TN. 38501
